

# Package ‘boostmath’

September 15, 2025

**Title** 'R' Bindings for the 'Boost' Math Functions

**Version** 1.2.0

**Description** 'R' bindings for the various functions and statistical distributions provided by the 'Boost' Math library <<https://www.boost.org/doc/libs/latest/libs/math/doc/html/index.html>>.

**License** MIT + file LICENSE

**URL** <https://github.com/andrjohns/boostmath>,  
<https://www.boost.org/doc/libs/latest/libs/math/doc/html/index.html>

**BugReports** <https://github.com/andrjohns/boostmath/issues>

**Encoding** UTF-8

**RoxygenNote** 7.3.3

**Depends** R (>= 3.0.2)

**LinkingTo** cpp11, BH (>= 1.87.0)

**NeedsCompilation** yes

**Suggests** knitr, rmarkdown, tinytest

**VignetteBuilder** knitr

**Author** Andrew R. Johnson [aut, cre] (ORCID:  
<<https://orcid.org/0000-0001-7000-8065>>)

**Maintainer** Andrew R. Johnson <[andrew.johnson@arjohnsonau.com](mailto:andrew.johnson@arjohnsonau.com)>

**Repository** CRAN

**Date/Publication** 2025-09-15 12:30:02 UTC

|----------------|-----------------------|
| airy_functions | <i>Airy Functions</i> |
|----------------|-----------------------|

---

## Description

Functions to compute the Airy functions Ai and Bi, their derivatives, and their zeros.

## Usage

```
airy_ai(x)
```

```
airy_bi(x)
```

```
airy_ai_prime(x)
```

```
airy_bi_prime(x)
```

```
airy_ai_zero(m = NULL, start_index = NULL, number_of_zeros = NULL)
```

```
airy_bi_zero(m = NULL, start_index = NULL, number_of_zeros = NULL)
```

## Arguments

|                 |                                             |
|-----------------|---------------------------------------------|
| x               | Input numeric value                         |
| m               | The index of the zero to find (1-based).    |
| start_index     | The starting index for the zeros (1-based). |
| number_of_zeros | The number of zeros to find.                |

## Value

Single numeric value for the Airy functions and their derivatives, or a vector of length `number_of_zeros` for the multiple zero functions.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
airy_ai(2)
airy_bi(2)
airy_ai_prime(2)
airy_bi_prime(2)
airy_ai_zero(1)
airy_bi_zero(1)
airy_ai_zero(start_index = 1, number_of_zeros = 5)
airy_bi_zero(start_index = 1, number_of_zeros = 5)
```

---

anderson\_darling\_test *Anderson-Darling Test for Normality*

---

### Description

Functions to perform the Anderson-Darling test for normality.

### Usage

```
anderson_darling_normality_statistic(x, mu = 0, sd = 1)
```

### Arguments

|    |                         |
|----|-------------------------|
| x  | A numeric vector.       |
| mu | A single numeric value. |
| sd | A single numeric value. |

### Value

A numeric value or vector with the computed statistic.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Anderson-Darling test for normality
anderson_darling_normality_statistic(c(1, 2, 3, 4, 5), 0, 1)
```

---

arcsine\_distribution *Arcsine Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the arcsine distribution.

**Usage**

```

arcsine_pdf(x, x_min = 0, x_max = 1)

arcsine_lpdf(x, x_min = 0, x_max = 1)

arcsine_cdf(x, x_min = 0, x_max = 1)

arcsine_lcdf(x, x_min = 0, x_max = 1)

arcsine_quantile(p, x_min = 0, x_max = 1)

```

**Arguments**

|       |                                                  |
|-------|--------------------------------------------------|
| x     | quantile                                         |
| x_min | minimum value of the distribution (default is 0) |
| x_max | maximum value of the distribution (default is 1) |
| p     | probability                                      |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```

arcsine_pdf(0.5)
arcsine_lpdf(0.5)
arcsine_cdf(0.5)
arcsine_lcdf(0.5)
arcsine_quantile(0.5)

```

---

barycentric\_rational    *Barycentric Rational Interpolation*

---

**Description**

Constructs a barycentric rational interpolator given data points.

**Usage**

```

barycentric_rational(x, y, order = 3)

```

**Arguments**

|       |                                                                                  |
|-------|----------------------------------------------------------------------------------|
| x     | Numeric vector of data points (abscissas).                                       |
| y     | Numeric vector of data values (ordinates).                                       |
| order | Integer representing the approximation order of the interpolator, defaults to 3. |

**Value**

An object of class `barycentric_rational_interpolator` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.

**Examples**

```
x <- c(0, 1, 2, 3)
y <- c(1, 2, 0, 2)
order <- 3
interpolator <- barycentric_rational(x, y, order)
xi <- 1.5
interpolator$interpolate(xi)
interpolator$prime(xi)
```

---

`basic_functions`*Basic Mathematical Functions*

---

**Description**

Functions to compute sine, cosine, logarithm, exponential, cube root, square root, power, hypotenuse, and inverse square root.

**Usage**`sin_pi(x)``cos_pi(x)``log1p_boost(x)``expm1_boost(x)``cbrt(x)``sqrt1pm1(x)``powm1(x, y)``hypot(x, y)``rsqrt(x)`

**Arguments**

|   |                                                                 |
|---|-----------------------------------------------------------------|
| x | Input numeric value                                             |
| y | Second input numeric value (for power and hypotenuse functions) |

**Value**

A single numeric value with the computed result of the function.

**See Also**

[Boost Documentation](#)) for more details on the mathematical background.

**Examples**

```
# sin(pi * 0.5)
sin_pi(0.5)
# cos(pi * 0.5)
cos_pi(0.5)
# log(1 + 0.5)
log1p_boost(0.5)
# exp(0.5) - 1
expm1_boost(0.5)
cbrt(8)
# sqrt(1 + 0.5) - 1
sqrt1pm1(0.5)
# 2^3 - 1
powm1(2, 3)
hypot(3, 4)
rsqrt(4)
```

---

bernoulli\_distribution

*Bernoulli Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Bernoulli distribution.

**Usage**

```
bernoulli_pdf(x, p_success)

bernoulli_lpdf(x, p_success)

bernoulli_cdf(x, p_success)

bernoulli_lcdf(x, p_success)

bernoulli_quantile(p, p_success)
```

**Arguments**

|           |                                                       |
|-----------|-------------------------------------------------------|
| x         | quantile (0 or 1)                                     |
| p_success | probability of success ( $0 \leq p\_success \leq 1$ ) |
| p         | probability ( $0 \leq p \leq 1$ )                     |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
bernoulli_pdf(1, 0.5)
bernoulli_lpdf(1, 0.5)
bernoulli_cdf(1, 0.5)
bernoulli_lcdf(1, 0.5)
bernoulli_quantile(0.5, 0.5)
```

---

|                  |                                                       |
|------------------|-------------------------------------------------------|
| bessel_functions | <i>Bessel Functions, Their Derivatives, and Zeros</i> |
|------------------|-------------------------------------------------------|

---

**Description**

Functions to compute Bessel functions of the first and second kind, their modified versions, spherical Bessel functions, and their derivatives and zeros.

**Usage**

```
cyl_bessel_j(v, x)

cyl_neumann(v, x)

cyl_bessel_j_zero(v, m = NULL, start_index = NULL, number_of_zeros = NULL)

cyl_neumann_zero(v, m = NULL, start_index = NULL, number_of_zeros = NULL)

cyl_bessel_i(v, x)

cyl_bessel_k(v, x)

sph_bessel(v, x)

sph_neumann(v, x)
```

```
cyl_bessel_j_prime(v, x)
```

```
cyl_neumann_prime(v, x)
```

```
cyl_bessel_i_prime(v, x)
```

```
cyl_bessel_k_prime(v, x)
```

```
sph_bessel_prime(v, x)
```

```
sph_neumann_prime(v, x)
```

### Arguments

|                 |                                             |
|-----------------|---------------------------------------------|
| v               | Order of the Bessel function                |
| x               | Argument of the Bessel function             |
| m               | The index of the zero to find (1-based).    |
| start_index     | The starting index for the zeros (1-based). |
| number_of_zeros | The number of zeros to find.                |

### Value

Single numeric value for the Bessel functions and their derivatives, or a vector of length `number_of_zeros` for the multiple zero functions.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Bessel function of the first kind J_0(1)
cyl_bessel_j(0, 1)
# Bessel function of the second kind Y_0(1)
cyl_neumann(0, 1)
# Modified Bessel function of the first kind I_0(1)
cyl_bessel_i(0, 1)
# Modified Bessel function of the second kind K_0(1)
cyl_bessel_k(0, 1)
# Spherical Bessel function of the first kind j_0(1)
sph_bessel(0, 1)
# Spherical Bessel function of the second kind y_0(1)
sph_neumann(0, 1)
# Derivative of the Bessel function of the first kind J_0(1)
cyl_bessel_j_prime(0, 1)
# Derivative of the Bessel function of the second kind Y_0(1)
cyl_neumann_prime(0, 1)
# Derivative of the modified Bessel function of the first kind I_0(1)
```

```

cyl_bessel_i_prime(0, 1)
# Derivative of the modified Bessel function of the second kind K_0(1)
cyl_bessel_k_prime(0, 1)
# Derivative of the spherical Bessel function of the first kind j_0(1)
sph_bessel_prime(0, 1)
# Derivative of the spherical Bessel function of the second kind y_0(1)
sph_neumann_prime(0, 1)
# Finding the first zero of the Bessel function of the first kind J_0
cyl_bessel_j_zero(0, 1)
# Finding the first zero of the Bessel function of the second kind Y_0
cyl_neumann_zero(0, 1)
# Finding multiple zeros of the Bessel function of the first kind J_0 starting from index 1
cyl_bessel_j_zero(0, start_index = 1, number_of_zeros = 5)
# Finding multiple zeros of the Bessel function of the second kind Y_0 starting from index 1
cyl_neumann_zero(0, start_index = 1, number_of_zeros = 5)

```

---

|                   |                                    |
|-------------------|------------------------------------|
| beta_distribution | <i>Beta Distribution Functions</i> |
|-------------------|------------------------------------|

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Beta distribution.

## Usage

```

beta_pdf(x, alpha, beta)

beta_lpdf(x, alpha, beta)

beta_cdf(x, alpha, beta)

beta_lcdf(x, alpha, beta)

beta_quantile(p, alpha, beta)

```

## Arguments

|       |                                   |
|-------|-----------------------------------|
| x     | quantile ( $0 \leq x \leq 1$ )    |
| alpha | shape parameter ( $\alpha > 0$ )  |
| beta  | shape parameter ( $\beta > 0$ )   |
| p     | probability ( $0 \leq p \leq 1$ ) |

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Beta distribution with shape parameters alpha = 2, beta = 5
beta_pdf(0.5, 2, 5)
beta_lpdf(0.5, 2, 5)
beta_cdf(0.5, 2, 5)
beta_lcdf(0.5, 2, 5)
beta_quantile(0.5, 2, 5)
```

---

beta\_functions

*Beta Functions*

---

**Description**

Functions to compute the Euler beta function, normalised incomplete beta function, and their complements, as well as their inverses and derivatives.

**Usage**

```
beta_boost(a, b, x = NULL)

ibeta(a, b, x)

ibetac(a, b, x)

betac(a, b, x)

ibeta_inv(a, b, p)

ibetac_inv(a, b, q)

ibeta_inva(b, x, p)

ibetac_inva(b, x, q)

ibeta_invb(a, x, p)

ibetac_invb(a, x, q)

ibeta_derivative(a, b, x)
```

**Arguments**

|   |                                                  |
|---|--------------------------------------------------|
| a | First parameter of the beta function             |
| b | Second parameter of the beta function            |
| x | Upper limit of integration ( $0 \leq x \leq 1$ ) |
| p | Probability value ( $0 \leq p \leq 1$ )          |
| q | Probability value ( $0 \leq q \leq 1$ )          |

**Value**

A single numeric value with the computed beta function, normalised incomplete beta function, or their complements, depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
## Not run:
# Euler beta function B(2, 3)
beta_boost(2, 3)
# Normalised incomplete beta function I_x(2, 3) for x = 0.5

# Inverse of the normalised incomplete beta function I_x(a, b)
# with respect to b for x = 0.5 and p = 0.5
ibeta_invb(0.8, 0.5, 0.5)
# Inverse of the normalised complement of the incomplete beta function I_x(a, b)
# with respect to b for x = 0.5 and q = 0.5
ibetac_invb(2, 0.5, 0.5)
# Derivative of the incomplete beta function with respect to x for a = 2, b = 3, x = 0.5
ibeta_derivative(2, 3, 0.5)

## End(Not run)
```

---

|                   |                                       |
|-------------------|---------------------------------------|
| bezier_polynomial | <i>Bezier Polynomial Interpolator</i> |
|-------------------|---------------------------------------|

---

**Description**

Constructs a Bezier polynomial interpolator given control points.

**Usage**

```
bezier_polynomial(control_points)
```

**Arguments**

`control_points` List of control points, where each element is a numeric vector of length 3.

**Value**

An object of class `bezier_polynomial` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `edit_control_point(new_control_point, index)`: Insert a new control point at the specified index.

**Examples**

```
control_points <- list(c(0, 0, 0), c(1, 2, 0), c(2, 0, 0), c(3, 3, 0))
interpolator <- bezier_polynomial(control_points)
xi <- 1.5
interpolator$interpolate(xi)
interpolator$prime(xi)
new_control_point <- c(1.5, 1, 0)
interpolator$edit_control_point(new_control_point, 2)
```

---

|                  |                                      |
|------------------|--------------------------------------|
| bilinear_uniform | <i>Bilinear Uniform Interpolator</i> |
|------------------|--------------------------------------|

---

**Description**

Constructs a bilinear uniform interpolator given a grid of data points.

**Usage**

```
bilinear_uniform(x, rows, cols, dx = 1, dy = 1, x0 = 0, y0 = 0)
```

**Arguments**

|      |                                                                                              |
|------|----------------------------------------------------------------------------------------------|
| x    | Numeric vector of all grid elements                                                          |
| rows | Integer representing the number of rows in the grid                                          |
| cols | Integer representing the number of columns in the grid                                       |
| dx   | Numeric value representing the spacing between grid points in the x-direction, defaults to 1 |
| dy   | Numeric value representing the spacing between grid points in the y-direction, defaults to 1 |
| x0   | Numeric value representing the x-coordinate of the origin, defaults to 0                     |
| y0   | Numeric value representing the y-coordinate of the origin, defaults to 0                     |

**Value**

An object of class `bilinear_uniform` with methods:

- `interpolate(xi, yi)`: Evaluate the interpolator at point (xi, yi).

**Examples**

```
x <- seq(0, 1, length.out = 10)
interpolator <- bilinear_uniform(x, rows = 2, cols = 5)
xi <- 0.5
yi <- 0.5
interpolator$interpolate(xi, yi)
```

---

binomial\_distribution *Binomial Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Binomial distribution.

**Usage**

```
binomial_pdf(k, n, prob)

binomial_lpdf(k, n, prob)

binomial_cdf(k, n, prob)

binomial_lcdf(k, n, prob)

binomial_quantile(p, n, prob)
```

**Arguments**

|      |                                                                      |
|------|----------------------------------------------------------------------|
| k    | number of successes ( $0 \leq k \leq n$ )                            |
| n    | number of trials ( $n \geq 0$ )                                      |
| prob | probability of success on each trial ( $0 \leq \text{prob} \leq 1$ ) |
| p    | probability ( $0 \leq p \leq 1$ )                                    |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Binomial distribution with n = 10, prob = 0.5
binomial_pdf(3, 10, 0.5)
binomial_lpdf(3, 10, 0.5)
binomial_cdf(3, 10, 0.5)
binomial_lcdf(3, 10, 0.5)
binomial_quantile(0.5, 10, 0.5)
```

---

bivariate\_statistics    *Bivariate Statistics Functions*

---

**Description**

Functions to compute various bivariate statistics.

**Usage**

```
covariance(x, y)

means_and_covariance(x, y)

correlation_coefficient(x, y)
```

**Arguments**

|   |                   |
|---|-------------------|
| x | A numeric vector. |
| y | A numeric vector. |

**Value**

A numeric value or vector with the computed statistic.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Covariance
covariance(c(1, 2, 3), c(4, 5, 6))
# Means and Covariance
means_and_covariance(c(1, 2, 3), c(4, 5, 6))
# Correlation Coefficient
correlation_coefficient(c(1, 2, 3), c(4, 5, 6))
```

---

cardinal\_cubic\_b\_spline

*Cardinal Cubic B-Spline Interpolator*

---

**Description**

Constructs a cardinal cubic B-spline interpolator given data points.

**Usage**

```
cardinal_cubic_b_spline(
  y,
  t0,
  h,
  left_endpoint_derivative = NULL,
  right_endpoint_derivative = NULL
)
```

**Arguments**

|                           |                                                                   |
|---------------------------|-------------------------------------------------------------------|
| y                         | Numeric vector of data points to interpolate.                     |
| t0                        | Numeric scalar representing the starting point of the data.       |
| h                         | Numeric scalar representing the spacing between data points.      |
| left_endpoint_derivative  | Optional numeric scalar for the derivative at the left endpoint.  |
| right_endpoint_derivative | Optional numeric scalar for the derivative at the right endpoint. |

**Value**

An object of class `cardinal_cubic_b_spline` with methods:

- `interpolate(x)`: Evaluate the spline at point x.
- `prime(x)`: Evaluate the first derivative of the spline at point x.
- `double_prime(x)`: Evaluate the second derivative of the spline at point x.

**Examples**

```

y <- c(1, 2, 0, 2, 1)
t0 <- 0
h <- 1
spline_obj <- cardinal_cubic_b_spline(y, t0, h)
x <- 0.5
spline_obj$interpolate(x)
spline_obj$prime(x)
spline_obj$double_prime(x)

```

---

cardinal\_cubic\_hermite

*Cardinal Cubic Hermite Interpolator*

---

**Description**

Constructs a cardinal cubic Hermite interpolator given the vectors of abscissas, ordinates, and derivatives.

**Usage**

```
cardinal_cubic_hermite(y, dydx, x0, dx)
```

**Arguments**

|      |                                                       |
|------|-------------------------------------------------------|
| y    | Numeric vector of ordinates (y-coordinates).          |
| dydx | Numeric vector of derivatives (slopes) at each point. |
| x0   | Numeric value of the first abscissa (x-coordinate).   |
| dx   | Numeric value of the spacing between abscissas.       |

**Value**

An object of class `cardinal_cubic_hermite` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `domain()`: Get the domain of the interpolator.

**Examples**

```

y <- c(0, 1, 0)
dydx <- c(1, 0, -1)
interpolator <- cardinal_cubic_hermite(y, dydx, 0, 1)
xi <- 0.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$domain()

```

---

`cardinal_quadratic_b_spline`*Cardinal Quadratic B-Spline Interpolator*

---

## Description

Constructs a cardinal quadratic B-spline interpolator given control points.

## Usage

```
cardinal_quadratic_b_spline(  
  y,  
  t0,  
  h,  
  left_endpoint_derivative = NULL,  
  right_endpoint_derivative = NULL  
)
```

## Arguments

|                                        |                                                                   |
|----------------------------------------|-------------------------------------------------------------------|
| <code>y</code>                         | Numeric vector of data points to interpolate.                     |
| <code>t0</code>                        | Numeric scalar representing the starting point of the data.       |
| <code>h</code>                         | Numeric scalar representing the spacing between data points.      |
| <code>left_endpoint_derivative</code>  | Optional numeric scalar for the derivative at the left endpoint.  |
| <code>right_endpoint_derivative</code> | Optional numeric scalar for the derivative at the right endpoint. |

## Value

An object of class `cardinal_quadratic_b_spline` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.

## Examples

```
y <- c(0, 1, 0, 1)  
t0 <- 0  
h <- 1  
interpolator <- cardinal_quadratic_b_spline(y, t0, h)  
xi <- 0.5  
interpolator$interpolate(xi)  
interpolator$prime(xi)
```

---

`cardinal_quintic_b_spline`*Cardinal Quintic B-Spline Interpolator*

---

**Description**

Constructs a cardinal quintic B-spline interpolator given control points.

**Usage**

```
cardinal_quintic_b_spline(  
  y,  
  t0,  
  h,  
  left_endpoint_derivatives = NULL,  
  right_endpoint_derivatives = NULL  
)
```

**Arguments**

|                                         |                                                                               |
|-----------------------------------------|-------------------------------------------------------------------------------|
| <code>y</code>                          | Numeric vector of data points to interpolate.                                 |
| <code>t0</code>                         | Numeric scalar representing the starting point of the data.                   |
| <code>h</code>                          | Numeric scalar representing the spacing between data points.                  |
| <code>left_endpoint_derivatives</code>  | Optional two-element numeric vector for the derivative at the left endpoint.  |
| <code>right_endpoint_derivatives</code> | Optional two-element numeric vector for the derivative at the right endpoint. |

**Value**

An object of class `cardinal_quintic_b_spline` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `double_prime(xi)`: Evaluate the second derivative of the interpolator at point `xi`.

**Examples**

```
y <- seq(0, 1, length.out = 20)  
t0 <- 0  
h <- 1  
interpolator <- cardinal_quintic_b_spline(y, t0, h)  
xi <- 0.5  
interpolator$interpolate(xi)  
interpolator$prime(xi)  
interpolator$double_prime(xi)
```

---

cardinal\_quintic\_hermite

*Cardinal Quintic Hermite Interpolator*

---

## Description

Constructs a cardinal quintic Hermite interpolator given the vectors of ordinates, first derivatives, and second derivatives.

## Usage

```
cardinal_quintic_hermite(y, dydx, d2ydx2, x0, dx)
```

## Arguments

|        |                                                             |
|--------|-------------------------------------------------------------|
| y      | Numeric vector of ordinates (y-coordinates).                |
| dydx   | Numeric vector of first derivatives (slopes) at each point. |
| d2ydx2 | Numeric vector of second derivatives at each point.         |
| x0     | Numeric value of the first abscissa (x-coordinate).         |
| dx     | Numeric value of the spacing between abscissas.             |

## Value

An object of class `cardinal_quintic_hermite` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `double_prime(xi)`: Evaluate the second derivative of the interpolator at point `xi`.
- `domain()`: Get the domain of the interpolator.

## Examples

```
y <- c(0, 1, 0)
dydx <- c(1, 0, -1)
d2ydx2 <- c(0, -1, 0)
x0 <- 0
dx <- 1
interpolator <- cardinal_quintic_hermite(y, dydx, d2ydx2, x0, dx)
xi <- 0.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$double_prime(xi)
interpolator$domain()
```

---

|             |                                  |
|-------------|----------------------------------|
| catmull_rom | <i>Catmull-Rom Interpolation</i> |
|-------------|----------------------------------|

---

## Description

Constructs a Catmull-Rom spline interpolator given control points.

## Usage

```
catmull_rom(control_points, closed = FALSE, alpha = 0.5)
```

## Arguments

|                |                                                                                                                            |
|----------------|----------------------------------------------------------------------------------------------------------------------------|
| control_points | List of control points, where each element is a numeric vector of length 3.                                                |
| closed         | Logical indicating whether the spline is closed (i.e., the first and last control points are connected), defaults to false |
| alpha          | Numeric scalar for the tension parameter, defaults to 0.5                                                                  |

## Value

An object of class `catmull_rom` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `max_parameter()`: Get the maximum parameter value of the spline.
- `parameter_at_point(i)`: Get the parameter value at index `i`.

## Examples

```
control_points <- list(c(0, 0, 0), c(1, 1, 0), c(2, 0, 0), c(3, 1, 0))
interpolator <- catmull_rom(control_points)
xi <- 1.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$max_parameter()
interpolator$parameter_at_point(2)
```

---

|                     |                                      |
|---------------------|--------------------------------------|
| cauchy_distribution | <i>Cauchy Distribution Functions</i> |
|---------------------|--------------------------------------|

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Cauchy distribution.

**Usage**

```
cauchy_pdf(x, location = 0, scale = 1)
cauchy_lpdf(x, location = 0, scale = 1)
cauchy_cdf(x, location = 0, scale = 1)
cauchy_lcdf(x, location = 0, scale = 1)
cauchy_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Cauchy distribution with location = 0, scale = 1
cauchy_pdf(0)
cauchy_lpdf(0)
cauchy_cdf(0)
cauchy_lcdf(0)
cauchy_quantile(0.5)
```

---

`chatterjee_correlation`*Chatterjee Correlation Function*

---

**Description**

Functions to compute the Chatterjee correlation.

**Usage**

```
chatterjee_correlation(x, y)
```

**Arguments**

|                |                   |
|----------------|-------------------|
| <code>x</code> | A numeric vector. |
| <code>y</code> | A numeric vector. |

**Value**

A two-element numeric vector containing the test statistic and the p-value.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
x <- c(1, 2, 3, 4, 5)
y <- c(2, 3, 5, 7, 11)
# Chatterjee correlation
chatterjee_correlation(x, y)
```

---

`chebyshev_polynomials` *Chebyshev Polynomials and Related Functions*

---

**Description**

Functions to compute Chebyshev polynomials of the first and second kind.

**Usage**

```

chebyshev_next(x, Tn, Tn_1)

chebyshev_t(n, x)

chebyshev_u(n, x)

chebyshev_t_prime(n, x)

chebyshev_clenshaw_recurrence(c, x)

chebyshev_clenshaw_recurrence_ab(c, a, b, x)

```

**Arguments**

|      |                                                    |
|------|----------------------------------------------------|
| x    | Argument of the polynomial                         |
| Tn   | Value of the Chebyshev polynomial ( $T_n(x)$ )     |
| Tn_1 | Value of the Chebyshev polynomial ( $T_{n-1}(x)$ ) |
| n    | Degree of the polynomial                           |
| c    | Coefficients of the Chebyshev polynomial           |
| a    | Lower bound of the interval                        |
| b    | Upper bound of the interval                        |

**Value**

A single numeric value with the computed Chebyshev polynomial, its derivative, or related functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```

# Chebyshev polynomial of the first kind T_2(0.5)
chebyshev_t(2, 0.5)
# Chebyshev polynomial of the second kind U_2(0.5)
chebyshev_u(2, 0.5)
# Derivative of the Chebyshev polynomial of the first kind T_2'(0.5)
chebyshev_t_prime(2, 0.5)
# Next Chebyshev polynomial of the first kind T_3(0.5) using T_2(0.5) and T_1(0.5)
chebyshev_next(0.5, chebyshev_t(2, 0.5), chebyshev_t(1, 0.5))
# Chebyshev polynomial of the first kind using Clenshaw's recurrence with coefficients
# c = c(1, 0, -1) at x = 0.5
chebyshev_clenshaw_recurrence(c(1, 0, -1), 0.5)
# Chebyshev polynomial of the first kind using Clenshaw's recurrence with interval [0, 1]
chebyshev_clenshaw_recurrence_ab(c(1, 0, -1), 0, 1, 0.5)

```

---

`chi_squared_distribution`*Chi-Squared Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Chi-Squared distribution.

**Usage**`chi_squared_pdf(x, df)``chi_squared_lpdf(x, df)``chi_squared_cdf(x, df)``chi_squared_lcdf(x, df)``chi_squared_quantile(p, df)`**Arguments**

|                 |                                   |
|-----------------|-----------------------------------|
| <code>x</code>  | quantile                          |
| <code>df</code> | degrees of freedom ( $df > 0$ )   |
| <code>p</code>  | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Chi-Squared distribution with 3 degrees of freedom
chi_squared_pdf(2, 3)
chi_squared_lpdf(2, 3)
chi_squared_cdf(2, 3)
chi_squared_lcdf(2, 3)
chi_squared_quantile(0.5, 3)
```

---

`constants`*Boost Math Constants*

---

**Description**

Provides access to mathematical constants used in the Boost Math library.

**Usage**

```
constants(constant = NULL)
```

**Arguments**

|                       |                                                                                                                                             |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| <code>constant</code> | A string specifying the name of the constant to retrieve. If NULL, returns a list of all constants (see documentation below for full list). |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------|

**Value**

Requested constant value if `constant` is specified, otherwise a list of all available constants.

**See Also**

[Boost Documentation](#) for more details on the constants.

**Examples**

```
constants()
```

---

`cubic_hermite`*Cubic Hermite Interpolator*

---

**Description**

Constructs a cubic Hermite interpolator given the vectors of abscissas, ordinates, and derivatives.

**Usage**

```
cubic_hermite(x, y, dydx)
```

**Arguments**

|                   |                                                       |
|-------------------|-------------------------------------------------------|
| <code>x</code>    | Numeric vector of abscissas (x-coordinates).          |
| <code>y</code>    | Numeric vector of ordinates (y-coordinates).          |
| <code>dydx</code> | Numeric vector of derivatives (slopes) at each point. |

**Value**

An object of class `cubic_hermite` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `push_back(x, y, dydx)`: Add a new control point to the interpolator.
- `domain()`: Get the domain of the interpolator.

**Examples**

```
x <- c(0, 1, 2)
y <- c(0, 1, 0)
dydx <- c(1, 0, -1)
interpolator <- cubic_hermite(x, y, dydx)
xi <- 0.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$push_back(3, 0, 1)
interpolator$domain()
```

---

double\_exponential\_quadrature

*Double Exponential Quadrature*

---

**Description**

Functions for numerical integration using double exponential quadrature methods such as tanh-sinh, sinh-sinh, and exp-sinh quadrature.

**Usage**

```
tanh_sinh(f, a, b, tol = sqrt(.Machine$double.eps), max_refinements = 15)
```

```
sinh_sinh(f, tol = sqrt(.Machine$double.eps), max_refinements = 9)
```

```
exp_sinh(f, a, b, tol = sqrt(.Machine$double.eps), max_refinements = 9)
```

**Arguments**

|                              |                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------|
| <code>f</code>               | A function to integrate. It should accept a single numeric value and return a single numeric value.       |
| <code>a</code>               | The lower limit of integration.                                                                           |
| <code>b</code>               | The upper limit of integration.                                                                           |
| <code>tol</code>             | The tolerance for the approximation. Default is <code>sqrt(.Machine\$double.eps)</code> .                 |
| <code>max_refinements</code> | The maximum number of refinements to apply. Default is 15 for tanh-sinh and 9 for sinh-sinh and exp-sinh. |

**Value**

A single numeric value with the computed integral.

**Examples**

```
# Tanh-sinh quadrature of log(x) from 0 to 1
tanh_sinh(function(x) { log(x) * log1p(-x) }, a = 0, b = 1)
# Sinh-sinh quadrature of exp(-x^2)
sinh_sinh(function(x) { exp(-x * x) })
# Exp-sinh quadrature of exp(-3*x) from 0 to Inf
exp_sinh(function(x) { exp(-3 * x) }, a = 0, b = Inf)
```

---

|                    |                           |
|--------------------|---------------------------|
| elliptic_integrals | <i>Elliptic Integrals</i> |
|--------------------|---------------------------|

---

**Description**

Functions to compute various elliptic integrals, including Carlson's elliptic integrals and incomplete elliptic integrals.

**Usage**

```
ellint_rf(x, y, z)
ellint_rd(x, y, z)
ellint_rj(x, y, z, p)
ellint_rc(x, y)
ellint_rg(x, y, z)
ellint_1(k, phi = NULL)
ellint_2(k, phi = NULL)
ellint_3(k, n, phi = NULL)
ellint_d(k, phi = NULL)
jacobi_zeta(k, phi)
heuman_lambda(k, phi)
```

**Arguments**

|     |                                                                      |
|-----|----------------------------------------------------------------------|
| x   | First parameter of the integral                                      |
| y   | Second parameter of the integral                                     |
| z   | Third parameter of the integral                                      |
| p   | Fourth parameter of the integral (for Rj)                            |
| k   | Elliptic modulus (for incomplete elliptic integrals)                 |
| phi | Amplitude (for incomplete elliptic integrals)                        |
| n   | Characteristic (for incomplete elliptic integrals of the third kind) |

**Value**

A single numeric value with the computed elliptic integral.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Carlson's elliptic integral Rf with parameters x = 1, y = 2, z = 3
ellint_rf(1, 2, 3)
#' # Carlson's elliptic integral Rd with parameters x = 1, y = 2, z = 3
ellint_rd(1, 2, 3)
# Carlson's elliptic integral Rj with parameters x = 1, y = 2, z = 3, p = 4
ellint_rj(1, 2, 3, 4)
# Carlson's elliptic integral Rc with parameters x = 1, y = 2
ellint_rc(1, 2)
# Carlson's elliptic integral Rg with parameters x = 1, y = 2, z = 3
ellint_rg(1, 2, 3)
# Incomplete elliptic integral of the first kind with k = 0.5, phi = pi/4
ellint_1(0.5, pi / 4)
# Complete elliptic integral of the first kind
ellint_1(0.5)
# Incomplete elliptic integral of the second kind with k = 0.5, phi = pi/4
ellint_2(0.5, pi / 4)
# Complete elliptic integral of the second kind
ellint_2(0.5)
# Incomplete elliptic integral of the third kind with k = 0.5, n = 0.5, phi = pi/4
ellint_3(0.5, 0.5, pi / 4)
# Complete elliptic integral of the third kind with k = 0.5, n = 0.5
ellint_3(0.5, 0.5)
# Incomplete elliptic integral D with k = 0.5, phi = pi/4
ellint_d(0.5, pi / 4)
# Complete elliptic integral D
ellint_d(0.5)
# Jacobi zeta function with k = 0.5, phi = pi/4
jacobi_zeta(0.5, pi / 4)
# Heuman's lambda function with k = 0.5, phi = pi/4
heuman_lambda(0.5, pi / 4)
```

**Description**

Functions to compute the error function, complementary error function, and their inverses.

**Usage**

```
erf(x)

erfc(x)

erf_inv(p)

erfc_inv(p)
```

**Arguments**

|   |                                         |
|---|-----------------------------------------|
| x | Input numeric value                     |
| p | Probability value ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed error function, complementary error function, or their inverses.

**See Also**

[Boost Documentation](#) for more details

**Examples**

```
# Error function
erf(0.5)
# Complementary error function
erfc(0.5)
# Inverse error function
erf_inv(0.5)
# Inverse complementary error function
erfc_inv(0.5)
```

---

`exponential_distribution`*Exponential Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Exponential distribution.

**Usage**`exponential_pdf(x, lambda)``exponential_lpdf(x, lambda)``exponential_cdf(x, lambda)``exponential_lcdf(x, lambda)``exponential_quantile(p, lambda)`**Arguments**

|                     |                                   |
|---------------------|-----------------------------------|
| <code>x</code>      | quantile                          |
| <code>lambda</code> | rate parameter ( $\lambda > 0$ )  |
| <code>p</code>      | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Exponential distribution with rate parameter lambda = 2
exponential_pdf(1, 2)
exponential_lpdf(1, 2)
exponential_cdf(1, 2)
exponential_lcdf(1, 2)
exponential_quantile(0.5, 2)
```

---

exponential\_integrals *Exponential Integrals*

---

### Description

Functions to compute various exponential integrals, including  $E_n$  and  $E_i$ .

### Usage

```
expint_en(n, z)
```

```
expint_ei(z)
```

### Arguments

|   |                                                 |
|---|-------------------------------------------------|
| n | Order of the integral (for $E_n$ )              |
| z | Argument of the integral (for $E_n$ and $E_i$ ) |

### Value

A single numeric value with the computed exponential integral.

### See Also

[Boost Documentation](#) for

### Examples

```
# Exponential integral  $E_n$  with  $n = 1$  and  $z = 2$ 
expint_en(1, 2)
# Exponential integral  $E_i$  with  $z = 2$ 
expint_ei(2)
```

---

extreme\_value\_distribution  
*Extreme Value Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Extreme Value distribution.

**Usage**

```
extreme_value_pdf(x, location = 0, scale = 1)

extreme_value_lpdf(x, location = 0, scale = 1)

extreme_value_cdf(x, location = 0, scale = 1)

extreme_value_lcdf(x, location = 0, scale = 1)

extreme_value_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Extreme Value distribution with location = 0, scale = 1
extreme_value_pdf(0)
extreme_value_lpdf(0)
extreme_value_cdf(0)
extreme_value_lcdf(0)
extreme_value_quantile(0.5)
```

---

factorials\_and\_binomial\_coefficients

*Factorials and Binomial Coefficients*

---

**Description**

Functions to compute factorials, double factorials, rising and falling factorials, and binomial coefficients.

**Usage**

```
factorial_boost(i)

unchecked_factorial(i)

max_factorial()

double_factorial(i)

rising_factorial(x, i)

falling_factorial(x, i)

binomial_coefficient(n, k)
```

**Arguments**

|   |                                                                  |
|---|------------------------------------------------------------------|
| i | Non-negative integer input for factorials and double factorials. |
| x | Base value for rising and falling factorials.                    |
| n | Total number of elements for binomial coefficients.              |
| k | Number of elements to choose for binomial coefficients.          |

**Value**

A single numeric value with the computed factorial, double factorial, rising factorial, falling factorial, or binomial coefficient.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Factorial of 5
factorial_boost(5)
# Unchecked factorial of 5 (using table lookup)
unchecked_factorial(5)
# Maximum factorial value that can be computed
max_factorial()
# Double factorial of 6
double_factorial(6)
# Rising factorial of 3 with exponent 2
rising_factorial(3, 2)
# Falling factorial of 3 with exponent 2
falling_factorial(3, 2)
# Binomial coefficient "5 choose 2"
binomial_coefficient(5, 2)
```

---

 filters

*Filters*

---

### Description

Functions to compute Daubechies wavelet and scaling filters.

### Usage

```
daubechies_scaling_filter(order)
```

```
daubechies_wavelet_filter(order)
```

### Arguments

|       |                                                                                      |
|-------|--------------------------------------------------------------------------------------|
| order | An integer specifying the order of the Daubechies filter (must be between 1 and 19). |
|-------|--------------------------------------------------------------------------------------|

### Value

A numeric vector of size 2\*order containing the filter coefficients.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Daubechies Scaling Filter of order 4
daubechies_scaling_filter(4)
# Daubechies Wavelet Filter of order 4
daubechies_wavelet_filter(4)
```

---

 fisher\_f\_distribution *Fisher F Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Fisher F distribution.

**Usage**

```
fisher_f_pdf(x, df1, df2)

fisher_f_lpdf(x, df1, df2)

fisher_f_cdf(x, df1, df2)

fisher_f_lcdf(x, df1, df2)

fisher_f_quantile(p, df1, df2)
```

**Arguments**

|     |                                                  |
|-----|--------------------------------------------------|
| x   | quantile                                         |
| df1 | degrees of freedom for the numerator (df1 > 0)   |
| df2 | degrees of freedom for the denominator (df2 > 0) |
| p   | probability (0 <= p <= 1)                        |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Fisher F distribution with df1 = 5, df2 = 2
fisher_f_pdf(1, 5, 2)
fisher_f_lpdf(1, 5, 2)
fisher_f_cdf(1, 5, 2)
fisher_f_lcdf(1, 5, 2)
fisher_f_quantile(0.5, 5, 2)
```

---

|                    |                                     |
|--------------------|-------------------------------------|
| gamma_distribution | <i>Gamma Distribution Functions</i> |
|--------------------|-------------------------------------|

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Gamma distribution.

**Usage**

```
gamma_pdf(x, shape, scale)

gamma_lpdf(x, shape, scale)

gamma_cdf(x, shape, scale)

gamma_lcdf(x, shape, scale)

gamma_quantile(p, shape, scale)
```

**Arguments**

|       |                             |
|-------|-----------------------------|
| x     | quantile                    |
| shape | shape parameter (shape > 0) |
| scale | scale parameter (scale > 0) |
| p     | probability (0 <= p <= 1)   |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Gamma distribution with shape = 3, scale = 4
gamma_pdf(2, 3, 4)
gamma_lpdf(2, 3, 4)
gamma_cdf(2, 3, 4)
gamma_lcdf(2, 3, 4)
gamma_quantile(0.5, 3, 4)
```

---

gamma\_functions

*Gamma Functions*

---

**Description**

Functions to compute the gamma function, its logarithm, digamma, trigamma, polygamma, and various incomplete gamma functions.

**Usage**

tgamma(z)  
tgamma1pm1(z)  
lgamma\_boost(z)  
digamma\_boost(z)  
trigamma\_boost(z)  
polygamma(n, z)  
tgamma\_ratio(a, b)  
tgamma\_delta\_ratio(a, delta)  
gamma\_p(a, z)  
gamma\_q(a, z)  
tgamma\_lower(a, z)  
tgamma\_upper(a, z)  
gamma\_q\_inv(a, q)  
gamma\_p\_inv(a, p)  
gamma\_q\_inva(z, q)  
gamma\_p\_inva(z, p)  
gamma\_p\_derivative(a, z)

**Arguments**

|       |                                                        |
|-------|--------------------------------------------------------|
| z     | Input numeric value for the gamma function             |
| n     | Order of the polygamma function (non-negative integer) |
| a     | Argument for the incomplete gamma functions            |
| b     | Denominator argument for the ratio of gamma functions  |
| delta | Increment for the ratio of gamma functions             |
| q     | Probability value for the incomplete gamma functions   |
| p     | Probability value for the incomplete gamma functions   |

**Value**

A single numeric value with the computed gamma function, logarithm, digamma, trigamma, polygamma, or incomplete gamma functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
## Not run:
# Gamma function for  $z = 5$ 
tgamma(5)
# Gamma function for  $(1 + z) - 1$ , where  $z = 5$ 
tgamma1pm1(5)

`gegenbauer_polynomials`*Gegenbauer Polynomials and Related Functions*

---

## Description

Functions to compute Gegenbauer polynomials, their derivatives, and related functions.

## Usage

```
gegenbauer(n, lambda, x)
```

```
gegenbauer_prime(n, lambda, x)
```

```
gegenbauer_derivative(n, lambda, x, k)
```

## Arguments

|                     |                             |
|---------------------|-----------------------------|
| <code>n</code>      | Degree of the polynomial    |
| <code>lambda</code> | Parameter of the polynomial |
| <code>x</code>      | Argument of the polynomial  |
| <code>k</code>      | Order of the derivative     |

## Value

A single numeric value with the computed Gegenbauer polynomial, its derivative, or k-th derivative.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Gegenbauer polynomial  $C_2^{(1)}(0.5)$ 
gegenbauer(2, 1, 0.5)
# Derivative of the Gegenbauer polynomial  $C_2^{(1)'}(0.5)$ 
gegenbauer_prime(2, 1, 0.5)
# k-th derivative of the Gegenbauer polynomial  $C_2^{(1)''}(0.5)$ 
gegenbauer_derivative(2, 1, 0.5, 2)
```

---

`geometric_distribution`*Geometric Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Geometric distribution.

**Usage**

```
geometric_pdf(x, prob)  
  
geometric_lpdf(x, prob)  
  
geometric_cdf(x, prob)  
  
geometric_lcdf(x, prob)  
  
geometric_quantile(p, prob)
```

**Arguments**

|                   |                                                  |
|-------------------|--------------------------------------------------|
| <code>x</code>    | quantile (non-negative integer)                  |
| <code>prob</code> | probability of success ( $0 < \text{prob} < 1$ ) |
| <code>p</code>    | probability ( $0 \leq p \leq 1$ )                |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Geometric distribution with probability of success prob = 0.5  
geometric_pdf(3, 0.5)  
geometric_lpdf(3, 0.5)  
geometric_cdf(3, 0.5)  
geometric_lcdf(3, 0.5)  
geometric_quantile(0.5, 0.5)
```

---

|                  |                         |
|------------------|-------------------------|
| hankel_functions | <i>Hankel Functions</i> |
|------------------|-------------------------|

---

**Description**

Functions to compute cyclic and spherical Hankel functions of the first and second kinds.

**Usage**

`cyl_hankel_1(v, x)`

`cyl_hankel_2(v, x)`

`sph_hankel_1(v, x)`

`sph_hankel_2(v, x)`

**Arguments**

|                |                                 |
|----------------|---------------------------------|
| <code>v</code> | Order of the Hankel function    |
| <code>x</code> | Argument of the Hankel function |

**Value**

A single complex value with the computed Hankel function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
cyl_hankel_1(2, 0.5)
cyl_hankel_2(2, 0.5)
sph_hankel_1(2, 0.5)
sph_hankel_2(2, 0.5)
```

---

|                     |                                                  |
|---------------------|--------------------------------------------------|
| hermite_polynomials | <i>Hermite Polynomials and Related Functions</i> |
|---------------------|--------------------------------------------------|

---

**Description**

Functions to compute Hermite polynomials.

**Usage**

```
hermite(n, x)

hermite_next(n, x, Hn, Hnm1)
```

**Arguments**

|      |                                                  |
|------|--------------------------------------------------|
| n    | Degree of the polynomial                         |
| x    | Argument of the polynomial                       |
| Hn   | Value of the Hermite polynomial ( $H_n(x)$ )     |
| Hnm1 | Value of the Hermite polynomial ( $H_{n-1}(x)$ ) |

**Value**

A single numeric value with the computed Hermite polynomial or its next value.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hermite polynomial H_2(0.5)
hermite(2, 0.5)
# Next Hermite polynomial H_3(0.5) using H_2(0.5) and H_1(0.5)
hermite_next(2, 0.5, hermite(2, 0.5), hermite(1, 0.5))
```

---

holtsmark\_distribution

*Holtsmark Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Holtsmark distribution.

**Usage**

```
holtsmark_pdf(x, location = 0, scale = 1)

holtsmark_lpdf(x, location = 0, scale = 1)

holtsmark_cdf(x, location = 0, scale = 1)

holtsmark_lcdf(x, location = 0, scale = 1)

holtsmark_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Holtmark distribution with location 0 and scale 1
holtmark_pdf(3)
holtmark_lpdf(3)
holtmark_cdf(3)
holtmark_lcdf(3)
holtmark_quantile(0.5)
```

---

hyperexponential\_distribution

*Hyperexponential Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Hyperexponential distribution.

**Usage**

```
hyperexponential_pdf(x, probabilities, rates)

hyperexponential_lpdf(x, probabilities, rates)

hyperexponential_cdf(x, probabilities, rates)

hyperexponential_lcdf(x, probabilities, rates)

hyperexponential_quantile(p, probabilities, rates)
```

**Arguments**

|               |                                         |
|---------------|-----------------------------------------|
| x             | quantile                                |
| probabilities | vector of probabilities (sum must be 1) |
| rates         | vector of rates (all rates must be > 0) |
| p             | probability ( $0 \leq p \leq 1$ )       |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hyperexponential distribution with probabilities = c(0.5, 0.5) and rates = c(1, 2)
hyperexponential_pdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_lpdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_cdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_lcdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_quantile(0.5, c(0.5, 0.5), c(1, 2))
```

---

hypergeometric\_distribution

*Hypergeometric Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Hypergeometric distribution.

**Usage**

```
hypergeometric_pdf(x, r, n, N)

hypergeometric_lpdf(x, r, n, N)

hypergeometric_cdf(x, r, n, N)

hypergeometric_lcdf(x, r, n, N)

hypergeometric_quantile(p, r, n, N)
```

**Arguments**

|   |                                                      |
|---|------------------------------------------------------|
| x | quantile (non-negative integer)                      |
| r | number of successes in the population ( $r \geq 0$ ) |
| n | number of draws ( $n \geq 0$ )                       |
| N | population size ( $N \geq r$ )                       |
| p | probability ( $0 \leq p \leq 1$ )                    |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hypergeometric distribution with r = 5, n = 10, N = 20
hypergeometric_pdf(3, 5, 10, 20)
hypergeometric_lpdf(3, 5, 10, 20)
hypergeometric_cdf(3, 5, 10, 20)
hypergeometric_lcdf(3, 5, 10, 20)
hypergeometric_quantile(0.5, 5, 10, 20)
```

---

hypergeometric\_functions

*Hypergeometric Functions*

---

**Description**

Functions to compute various hypergeometric functions.

**Usage**

```
hypergeometric_1F0(a, z)
hypergeometric_0F1(b, z)
hypergeometric_2F0(a1, a2, z)
hypergeometric_1F1(a, b, z)
hypergeometric_1F1_regularized(a, b, z)
log_hypergeometric_1F1(a, b, z)
hypergeometric_pFq(a, b, z)
```

**Arguments**

|    |                                                 |
|----|-------------------------------------------------|
| a  | Parameter of the hypergeometric function        |
| z  | Argument of the hypergeometric function         |
| b  | Second parameter of the hypergeometric function |
| a1 | First parameter of the hypergeometric function  |
| a2 | Second parameter of the hypergeometric function |

**Value**

A single numeric value with the computed hypergeometric function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hypergeometric Function 1F0
hypergeometric_1F0(2, 0.2)
# Hypergeometric Function 0F1
hypergeometric_0F1(1, 0.8)
# Hypergeometric Function 2F0
hypergeometric_2F0(0.1, -1, 0.1)
# Hypergeometric Function 1F1
hypergeometric_1F1(2, 3, 1)
# Regularised Hypergeometric Function 1F1
hypergeometric_1F1_regularized(2, 3, 1)
# Logarithm of the Hypergeometric Function 1F1
log_hypergeometric_1F1(2, 3, 1)
# Hypergeometric Function pFq
hypergeometric_pFq(c(2, 3), c(4, 5), 6)
```

---

inverse\_chi\_squared\_distribution

*Inverse Chi-Squared Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Inverse Chi-Squared distribution.

**Usage**

```
inverse_chi_squared_pdf(x, df, scale = 1)

inverse_chi_squared_lpdf(x, df, scale = 1)

inverse_chi_squared_cdf(x, df, scale = 1)

inverse_chi_squared_lcdf(x, df, scale = 1)

inverse_chi_squared_quantile(p, df, scale = 1)
```

**Arguments**

|       |                                   |
|-------|-----------------------------------|
| x     | quantile                          |
| df    | degrees of freedom ( $df > 0$ )   |
| scale | scale parameter (default is 1)    |
| p     | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Chi-Squared distribution with 3 degrees of freedom, scale = 1
inverse_chi_squared_pdf(2, 3, 1)
inverse_chi_squared_lpdf(2, 3, 1)
inverse_chi_squared_cdf(2, 3, 1)
inverse_chi_squared_lcdf(2, 3, 1)
inverse_chi_squared_quantile(0.5, 3, 1)
```

---

inverse\_gamma\_distribution

*Inverse Gamma Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Inverse Gamma distribution.

**Usage**

```
inverse_gamma_pdf(x, shape, scale)

inverse_gamma_lpdf(x, shape, scale)

inverse_gamma_cdf(x, shape, scale)

inverse_gamma_lcdf(x, shape, scale)

inverse_gamma_quantile(p, shape, scale)
```

**Arguments**

|       |                             |
|-------|-----------------------------|
| x     | quantile                    |
| shape | shape parameter (shape > 0) |
| scale | scale parameter (scale > 0) |
| p     | probability (0 <= p <= 1)   |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Gamma distribution with shape = 3, scale = 4
inverse_gamma_pdf(2, 3, 4)
inverse_gamma_lpdf(2, 3, 4)
inverse_gamma_cdf(2, 3, 4)
inverse_gamma_lcdf(2, 3, 4)
inverse_gamma_quantile(0.5, 3, 4)
```

---

inverse\_gaussian\_distribution

*Inverse Gaussian Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Inverse Gaussian distribution.

**Usage**

```
inverse_gaussian_pdf(x, mu, lambda)

inverse_gaussian_lpdf(x, mu, lambda)

inverse_gaussian_cdf(x, mu, lambda)

inverse_gaussian_lcdf(x, mu, lambda)

inverse_gaussian_quantile(p, mu, lambda)
```

**Arguments**

|        |                                               |
|--------|-----------------------------------------------|
| x      | quantile                                      |
| mu     | mean parameter ( $\mu > 0$ )                  |
| lambda | scale (precision) parameter ( $\lambda > 0$ ) |
| p      | probability ( $0 \leq p \leq 1$ )             |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Gaussian distribution with mu = 3, lambda = 4
inverse_gaussian_pdf(2, 3, 4)
inverse_gaussian_lpdf(2, 3, 4)
inverse_gaussian_cdf(2, 3, 4)
inverse_gaussian_lcdf(2, 3, 4)
inverse_gaussian_quantile(0.5, 3, 4)
```

---

inverse\_hyperbolic\_functions  
*Inverse Hyperbolic Functions*

---

**Description**

Functions to compute the inverse hyperbolic functions: `acosh`, `asinh`, and `atanh`.

**Usage**`acosh_boost(x)``asinh_boost(x)``atanh_boost(x)`**Arguments**

|   |                     |
|---|---------------------|
| x | Input numeric value |
|---|---------------------|

**Value**

A single numeric value with the computed inverse hyperbolic function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Hyperbolic Cosine
acosh_boost(2)
# Inverse Hyperbolic Sine
asinh_boost(1)
# Inverse Hyperbolic Tangent
atanh_boost(0.5)
```

---

`jacobi_elliptic_functions`*Jacobi Elliptic Functions*

---

**Description**

Functions to compute the Jacobi elliptic functions: sn, cn, dn, and others.

**Usage**`jacobi_elliptic(k, u)``jacobi_cd(k, u)``jacobi_cn(k, u)``jacobi_cs(k, u)``jacobi_dc(k, u)`

`jacobi_dn(k, u)``jacobi_ds(k, u)``jacobi_nc(k, u)``jacobi_nd(k, u)``jacobi_ns(k, u)``jacobi_sc(k, u)``jacobi_sd(k, u)``jacobi_sn(k, u)`

### Arguments

|                |                                     |
|----------------|-------------------------------------|
| <code>k</code> | Elliptic modulus ( $0 \leq k < 1$ ) |
| <code>u</code> | Argument of the elliptic functions  |

### Value

For `jacobi_elliptic`, a list containing the values of the Jacobi elliptic functions: `sn`, `cn`, `dn`. For individual functions, a single numeric value is returned.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Jacobi Elliptic Functions
k <- 0.5
u <- 2
jacobi_elliptic(k, u)
# Individual Jacobi Elliptic Functions
jacobi_cd(k, u)
jacobi_cn(k, u)
jacobi_cs(k, u)
jacobi_dc(k, u)
jacobi_dn(k, u)
jacobi_ds(k, u)
jacobi_nc(k, u)
jacobi_nd(k, u)
jacobi_ns(k, u)
jacobi_sc(k, u)
jacobi_sd(k, u)
jacobi_sn(k, u)
```

---

 jacobi\_polynomials      *Jacobi Polynomials and Related Functions*

---

**Description**

Functions to compute Jacobi polynomials, their derivatives, and related functions.

**Usage**

```
jacobi(n, alpha, beta, x)

jacobi_prime(n, alpha, beta, x)

jacobi_double_prime(n, alpha, beta, x)

jacobi_derivative(n, alpha, beta, x, k)
```

**Arguments**

|       |                                    |
|-------|------------------------------------|
| n     | Degree of the polynomial           |
| alpha | First parameter of the polynomial  |
| beta  | Second parameter of the polynomial |
| x     | Argument of the polynomial         |
| k     | Order of the derivative            |

**Value**

A single numeric value with the computed Jacobi polynomial, its derivative, or k-th derivative.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Jacobi polynomial  $P_2^{(1, 2)}(0.5)$ 
jacobi(2, 1, 2, 0.5)
# Derivative of the Jacobi polynomial  $P_2^{(1, 2)'}(0.5)$ 
jacobi_prime(2, 1, 2, 0.5)
# Second derivative of the Jacobi polynomial  $P_2^{(1, 2)''}(0.5)$ 
jacobi_double_prime(2, 1, 2, 0.5)
# 3rd derivative of the Jacobi polynomial  $P_2^{(1, 2)^{(k)}}(0.5)$ 
jacobi_derivative(2, 1, 2, 0.5, 3)
```

---

`jacobi_theta_functions`*Jacobi Theta Functions*

---

**Description**

Functions to compute the Jacobi theta functions  $(\theta_1, \theta_2, \theta_3, \theta_4)$  parameterised by either  $(q)$  or  $(\tau)$ .

**Usage**`jacobi_theta1(x, q)``jacobi_theta1tau(x, tau)``jacobi_theta2(x, q)``jacobi_theta2tau(x, tau)``jacobi_theta3(x, q)``jacobi_theta3tau(x, tau)``jacobi_theta3m1(x, q)``jacobi_theta3m1tau(x, tau)``jacobi_theta4(x, q)``jacobi_theta4tau(x, tau)``jacobi_theta4m1(x, q)``jacobi_theta4m1tau(x, tau)`**Arguments**

|                  |                                                                                                         |
|------------------|---------------------------------------------------------------------------------------------------------|
| <code>x</code>   | Input value                                                                                             |
| <code>q</code>   | The nome parameter of the Jacobi theta function ( $0 < q < 1$ )                                         |
| <code>tau</code> | The nome parameter of the Jacobi theta function ( $\tau = u + iv$ , where $u$ and $v$ are real numbers) |

**Value**

A single numeric value with the computed Jacobi theta function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Jacobi Theta Functions
x <- 0.5
q <- 0.9
tau <- 1.5
jacobi_theta1(x, q)
jacobi_theta1tau(x, tau)
jacobi_theta2(x, q)
jacobi_theta2tau(x, tau)
jacobi_theta3(x, q)
jacobi_theta3tau(x, tau)
jacobi_theta3m1(x, q)
jacobi_theta3m1tau(x, tau)
jacobi_theta4(x, q)
jacobi_theta4tau(x, tau)
jacobi_theta4m1(x, q)
jacobi_theta4m1tau(x, tau)
```

---

`kolmogorov_smirnov_distribution`

*Kolmogorov-Smirnov Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Kolmogorov-Smirnov distribution.

**Usage**

```
kolmogorov_smirnov_pdf(x, n)

kolmogorov_smirnov_lpdf(x, n)

kolmogorov_smirnov_cdf(x, n)

kolmogorov_smirnov_lcdf(x, n)

kolmogorov_smirnov_quantile(p, n)
```

**Arguments**

|   |                                   |
|---|-----------------------------------|
| x | quantile                          |
| n | sample size ( $n > 0$ )           |
| p | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Kolmogorov-Smirnov distribution with sample size n = 10
kolmogorov_smirnov_pdf(0.5, 10)
kolmogorov_smirnov_lpdf(0.5, 10)
kolmogorov_smirnov_cdf(0.5, 10)
kolmogorov_smirnov_lcdf(0.5, 10)
kolmogorov_smirnov_quantile(0.5, 10)
```

---

laguerre\_polynomials    *Laguerre Polynomials and Related Functions*

---

**Description**

Functions to compute Laguerre polynomials of the first kind.

**Usage**

```
laguerre(n, x)

laguerre_m(n, m, x)

laguerre_next(n, x, Ln, Lnm1)

laguerre_next_m(n, m, x, Ln, Lnm1)
```

**Arguments**

|      |                                                                      |
|------|----------------------------------------------------------------------|
| n    | Degree of the polynomial                                             |
| x    | Argument of the polynomial                                           |
| m    | Order of the polynomial (for Laguerre polynomials of the first kind) |
| Ln   | Value of the Laguerre polynomial ( $L_n(x)$ )                        |
| Lnm1 | Value of the Laguerre polynomial ( $L_{n-1}(x)$ )                    |

**Value**

A single numeric value with the computed Laguerre polynomial, its derivative, or related functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Laguerre polynomial of the first kind L_2(0.5)
laguerre(2, 0.5)
# Laguerre polynomial of the first kind with order 1 L_2^1(0.5)
laguerre_m(2, 1, 0.5)
# Next Laguerre polynomial of the first kind L_3(0.5) using L_2(0.5) and L_1(0.5)
laguerre_next(2, 0.5, laguerre(2, 0.5), laguerre(1, 0.5))
# Next Laguerre polynomial of the first kind with order 1 L_3^1(0.5) using L_2^1(0.5) and L_1^1(0.5)
laguerre_next_m(2, 1, 0.5, laguerre_m(2, 1, 0.5), laguerre_m(1, 1, 0.5))
```

---

|                    |                                               |
|--------------------|-----------------------------------------------|
| lambert_w_function | <i>Lambert W Function and Its Derivatives</i> |
|--------------------|-----------------------------------------------|

---

**Description**

Functions to compute the Lambert W function and its derivatives for the principal branch ( $W_0$ ) and the branch -1 ( $W_{-1}$ ).

**Usage**

```
lambert_w0(z)

lambert_wm1(z)

lambert_w0_prime(z)

lambert_wm1_prime(z)
```

**Arguments**

|                |                                    |
|----------------|------------------------------------|
| <code>z</code> | Argument of the Lambert W function |
|----------------|------------------------------------|

**Value**

A single numeric value with the computed Lambert W function or its derivative.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Lambert W Function (Principal Branch)
lambert_w0(0.3)
# Lambert W Function (Branch -1)
lambert_wm1(-0.3)
# Derivative of the Lambert W Function (Principal Branch)
lambert_w0_prime(0.3)
# Derivative of the Lambert W Function (Branch -1)
lambert_wm1_prime(-0.3)
```

---

|                     |                                      |
|---------------------|--------------------------------------|
| landau_distribution | <i>Landau Distribution Functions</i> |
|---------------------|--------------------------------------|

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Landau distribution.

**Usage**

```
landau_pdf(x, location = 0, scale = 1)
landau_lpdf(x, location = 0, scale = 1)
landau_cdf(x, location = 0, scale = 1)
landau_lcdf(x, location = 0, scale = 1)
landau_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Landau distribution with location 0 and scale 1
landau_pdf(3)
landau_lpdf(3)
landau_cdf(3)
landau_lcdf(3)
landau_quantile(0.5)
```

---

**laplace\_distribution**    *Laplace Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Laplace distribution.

**Usage**

```
laplace_pdf(x, location = 0, scale = 1)

laplace_lpdf(x, location = 0, scale = 1)

laplace_cdf(x, location = 0, scale = 1)

laplace_lcdf(x, location = 0, scale = 1)

laplace_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Laplace distribution with location = 0, scale = 1
laplace_pdf(0)
laplace_lpdf(0)
laplace_cdf(0)
laplace_lcdf(0)
laplace_quantile(0.5)
```

---

legendre\_polynomials    *Legendre Polynomials and Related Functions*

---

**Description**

Functions to compute Legendre polynomials of the first and second kind, their derivatives, zeros, and related functions.

**Usage**

```

legendre_p(n, x)

legendre_p_prime(n, x)

legendre_p_zeros(n)

legendre_p_m(n, m, x)

legendre_q(n, x)

legendre_next(n, x, Pl, Plm1)

legendre_next_m(n, m, x, Pl, Plm1)

```

**Arguments**

|      |                                                                      |
|------|----------------------------------------------------------------------|
| n    | Degree of the polynomial                                             |
| x    | Argument of the polynomial                                           |
| m    | Order of the polynomial (for Legendre polynomials of the first kind) |
| Pl   | Value of the Legendre polynomial ( $P_l(x)$ )                        |
| Plm1 | Value of the Legendre polynomial ( $P_{l-1}(x)$ )                    |

**Value**

A single numeric value with the computed Legendre polynomial, its derivative, zeros, or related functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```

# Legendre polynomial of the first kind P_2(0.5)
legendre_p(2, 0.5)
# Derivative of the Legendre polynomial of the first kind P_2'(0.5)
legendre_p_prime(2, 0.5)

```

```
# Zeros of the Legendre polynomial of the first kind P_2
legendre_p_zeros(2)
# Legendre polynomial of the first kind with order 1 P_2^1(0.5)
legendre_p_m(2, 1, 0.5)
# Legendre polynomial of the second kind Q_2(0.5)
legendre_q(2, 0.5)
# Next Legendre polynomial of the first kind P_3(0.5) using P_2(0.5) and P_1(0.5)
legendre_next(2, 0.5, legendre_p(2, 0.5), legendre_p(1, 0.5))
# Next Legendre polynomial of the first kind with order 1 P_3^1(0.5) using P_2^1(0.5) and P_1^1(0.5)
legendre_next_m(2, 1, 0.5, legendre_p_m(2, 1, 0.5), legendre_p_m(1, 1, 0.5))
```

---

|                   |                                    |
|-------------------|------------------------------------|
| linear_regression | <i>Linear Regression Functions</i> |
|-------------------|------------------------------------|

---

## Description

Functions to perform linear regression.

## Usage

```
simple_ordinary_least_squares(x, y)

simple_ordinary_least_squares_with_R_squared(x, y)
```

## Arguments

|   |                   |
|---|-------------------|
| x | A numeric vector. |
| y | A numeric vector. |

## Value

A two-element numeric vector containing the intercept and slope of the regression line, or a three-element vector containing the intercept, slope, and R-squared value if applicable.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Simple Ordinary Least Squares
x <- c(1, 2, 3, 4, 5)
y <- c(2, 3, 5, 7, 11)
simple_ordinary_least_squares(x, y)
# Simple Ordinary Least Squares with R-squared
simple_ordinary_least_squares_with_R_squared(x, y)
```

---

|                |                                           |
|----------------|-------------------------------------------|
| ljung_box_test | <i>Ljung-Box Test for Autocorrelation</i> |
|----------------|-------------------------------------------|

---

### Description

Functions to perform the Ljung-Box test for autocorrelation.

### Usage

```
ljung_box(v, lags = -1, fit_dof = 0)
```

### Arguments

|         |                         |
|---------|-------------------------|
| v       | A numeric vector.       |
| lags    | A single integer value. |
| fit_dof | A single integer value. |

### Value

A two-element numeric vector containing the test statistic and the p-value.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Ljung-Box test for autocorrelation
ljung_box(c(1, 2, 3, 4, 5), lags = 2, fit_dof = 0)
```

---

|                       |                                        |
|-----------------------|----------------------------------------|
| logistic_distribution | <i>Logistic Distribution Functions</i> |
|-----------------------|----------------------------------------|

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Logistic distribution.

**Usage**

```
logistic_pdf(x, location = 0, scale = 1)

logistic_lpdf(x, location = 0, scale = 1)

logistic_cdf(x, location = 0, scale = 1)

logistic_lcdf(x, location = 0, scale = 1)

logistic_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Logistic distribution with location = 0, scale = 1
logistic_pdf(0)
logistic_lpdf(0)
logistic_cdf(0)
logistic_lcdf(0)
logistic_quantile(0.5)
```

---

lognormal\_distribution

*Log Normal Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Log Normal distribution.

**Usage**

```
lognormal_pdf(x, location = 0, scale = 1)

lognormal_lpdf(x, location = 0, scale = 1)

lognormal_cdf(x, location = 0, scale = 1)

lognormal_lcdf(x, location = 0, scale = 1)

lognormal_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Log Normal distribution with location = 0, scale = 1
lognormal_pdf(0)
lognormal_lpdf(0)
lognormal_cdf(0)
lognormal_lcdf(0)
lognormal_quantile(0.5)
```

---

makima

---

*Modified Akima Interpolator*

---

**Description**

Constructs a Modified Akima interpolator given the vectors of abscissas, ordinates, and derivatives.

**Usage**

```
makima(x, y, left_endpoint_derivative = NULL, right_endpoint_derivative = NULL)
```

**Arguments**

`x`                      Numeric vector of abscissas (x-coordinates).  
`y`                      Numeric vector of ordinates (y-coordinates).  
`left_endpoint_derivative`  
                          Optional numeric value of the derivative at the left endpoint.  
`right_endpoint_derivative`  
                          Optional numeric value of the derivative at the right endpoint.

**Value**

An object of class `makima` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `push_back(x, y)`: Add a new control point

**Examples**

```
x <- c(0, 1, 2, 3)
y <- c(0, 1, 0, 1)
interpolator <- makima(x, y)
xi <- 0.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$push_back(4, 1)
```

---

mapairy\_distribution    *Map-Airy Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Map-Airy distribution.

**Usage**

```
mapairy_pdf(x, location = 0, scale = 1)

mapairy_lpdf(x, location = 0, scale = 1)

mapairy_cdf(x, location = 0, scale = 1)

mapairy_lcdf(x, location = 0, scale = 1)

mapairy_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Map-Airy distribution with location 0 and scale 1
mapairy_pdf(3)
mapairy_lpdf(3)
mapairy_cdf(3)
mapairy_lcdf(3)
mapairy_quantile(0.5)
```

---

negative\_binomial\_distribution

*Negative Binomial Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Negative Binomial distribution.

**Usage**

```
negative_binomial_pdf(x, successes, success_fraction)
negative_binomial_lpdf(x, successes, success_fraction)
negative_binomial_cdf(x, successes, success_fraction)
negative_binomial_lcdf(x, successes, success_fraction)
negative_binomial_quantile(p, successes, success_fraction)
```

**Arguments**

|                  |                                                                                   |
|------------------|-----------------------------------------------------------------------------------|
| x                | quantile                                                                          |
| successes        | number of successes (successes $\geq 0$ )                                         |
| success_fraction | probability of success on each trial ( $0 \leq \text{success\_fraction} \leq 1$ ) |
| p                | probability ( $0 \leq p \leq 1$ )                                                 |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
negative_binomial_pdf(3, 5, 0.5)
negative_binomial_lpdf(3, 5, 0.5)
negative_binomial_cdf(3, 5, 0.5)
negative_binomial_lcdf(3, 5, 0.5)
negative_binomial_quantile(0.5, 5, 0.5)
```

---

non\_central\_beta\_distribution

*Noncentral Beta Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Noncentral Beta distribution.

**Usage**

```
non_central_beta_pdf(x, alpha, beta, lambda)

non_central_beta_lpdf(x, alpha, beta, lambda)

non_central_beta_cdf(x, alpha, beta, lambda)

non_central_beta_lcdf(x, alpha, beta, lambda)

non_central_beta_quantile(p, alpha, beta, lambda)
```

**Arguments**

|        |                                              |
|--------|----------------------------------------------|
| x      | quantile ( $0 \leq x \leq 1$ )               |
| alpha  | first shape parameter ( $\alpha > 0$ )       |
| beta   | second shape parameter ( $\beta > 0$ )       |
| lambda | noncentrality parameter ( $\lambda \geq 0$ ) |
| p      | probability ( $0 \leq p \leq 1$ )            |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Noncentral Beta distribution with shape parameters alpha = 2, beta = 3
# and noncentrality parameter lambda = 1
non_central_beta_pdf(0.5, 2, 3, 1)
non_central_beta_lpdf(0.5, 2, 3, 1)
non_central_beta_cdf(0.5, 2, 3, 1)
non_central_beta_lcdf(0.5, 2, 3, 1)
non_central_beta_quantile(0.5, 2, 3, 1)
```

---

non\_central\_chi\_squared\_distribution

*Noncentral Chi-Squared Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Noncentral Chi-Squared distribution.

**Usage**

```
non_central_chi_squared_pdf(x, df, lambda)

non_central_chi_squared_lpdf(x, df, lambda)

non_central_chi_squared_cdf(x, df, lambda)

non_central_chi_squared_lcdf(x, df, lambda)

non_central_chi_squared_quantile(p, df, lambda)
```

**Arguments**

|        |                                             |
|--------|---------------------------------------------|
| x      | quantile                                    |
| df     | degrees of freedom ( $df > 0$ )             |
| lambda | noncentrality parameter ( $lambda \geq 0$ ) |
| p      | probability ( $0 \leq p \leq 1$ )           |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
## Not run:
# Noncentral Chi-Squared distribution with 3 degrees of freedom and noncentrality
# parameter 1
non_central_chi_squared_pdf(2, 3, 1)
non_central_chi_squared_lpdf(2, 3, 1)
non_central_chi_squared_cdf(2, 3, 1)
non_central_chi_squared_lcdf(2, 3, 1)
non_central_chi_squared_quantile(0.5, 3, 1)

## End(Not run)
```

---

non\_central\_f\_distribution

*Noncentral F Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Fisher F distribution.

**Usage**

```
non_central_f_pdf(x, df1, df2, lambda)

non_central_f_lpdf(x, df1, df2, lambda)

non_central_f_cdf(x, df1, df2, lambda)

non_central_f_lcdf(x, df1, df2, lambda)

non_central_f_quantile(p, df1, df2, lambda)
```

**Arguments**

|        |                                                  |
|--------|--------------------------------------------------|
| x      | quantile                                         |
| df1    | degrees of freedom for the numerator (df1 > 0)   |
| df2    | degrees of freedom for the denominator (df2 > 0) |
| lambda | noncentrality parameter (lambda >= 0)            |
| p      | probability (0 <= p <= 1)                        |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Noncentral F distribution with df1 = 5, df2 = 2 and noncentrality
# parameter 1
non_central_f_pdf(1, 5, 2, 1)
non_central_f_lpdf(1, 5, 2, 1)
non_central_f_cdf(1, 5, 2, 1)
non_central_f_lcdf(1, 5, 2, 1)
non_central_f_quantile(0.5, 5, 2, 1)
```

---

non\_central\_t\_distribution

*Noncentral T Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Noncentral T distribution.

**Usage**

```
non_central_t_pdf(x, df, delta)

non_central_t_lpdf(x, df, delta)

non_central_t_cdf(x, df, delta)

non_central_t_lcdf(x, df, delta)

non_central_t_quantile(p, df, delta)
```

**Arguments**

|       |                                            |
|-------|--------------------------------------------|
| x     | quantile                                   |
| df    | degrees of freedom ( $df > 0$ )            |
| delta | noncentrality parameter ( $delta \geq 0$ ) |
| p     | probability ( $0 \leq p \leq 1$ )          |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Noncentral T distribution with 3 degrees of freedom and noncentrality parameter 1
non_central_t_pdf(0, 3, 1)
non_central_t_lpdf(0, 3, 1)
non_central_t_cdf(0, 3, 1)
non_central_t_lcdf(0, 3, 1)
non_central_t_quantile(0.5, 3, 1)
```

---

|                     |                                      |
|---------------------|--------------------------------------|
| normal_distribution | <i>Normal Distribution Functions</i> |
|---------------------|--------------------------------------|

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Normal distribution.

**Usage**

```
normal_pdf(x, mean = 0, sd = 1)

normal_lpdf(x, mean = 0, sd = 1)

normal_cdf(x, mean = 0, sd = 1)

normal_lcdf(x, mean = 0, sd = 1)

normal_quantile(p, mean = 0, sd = 1)
```

**Arguments**

|      |                                             |
|------|---------------------------------------------|
| x    | quantile                                    |
| mean | mean parameter (default is 0)               |
| sd   | standard deviation parameter (default is 1) |
| p    | probability ( $0 \leq p \leq 1$ )           |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Normal distribution with mean = 0, sd = 1
normal_pdf(0)
normal_lpdf(0)
normal_cdf(0)
normal_lcdf(0)
normal_quantile(0.5)
```

---

number\_series

*Number Series*

---

**Description**

Functions to compute Bernoulli numbers, tangent numbers, fibonacci numbers, and prime numbers.

**Usage**

```
bernoulli_b2n(n = NULL, start_index = NULL, number_of_bernoullis_b2n = NULL)

max_bernoulli_b2n()

unchecked_bernoulli_b2n(n)

tangent_t2n(n = NULL, start_index = NULL, number_of_tangent_t2n = NULL)

prime(n)

max_prime()

fibonacci(n)

unchecked_fibonacci(n)
```

## Arguments

|                                       |                                                                              |
|---------------------------------------|------------------------------------------------------------------------------|
| <code>n</code>                        | Index of number to compute (must be a non-negative integer)                  |
| <code>start_index</code>              | The starting index for the range of numbers (must be a non-negative integer) |
| <code>number_of_bernoullis_b2n</code> | The number of Bernoulli numbers to compute                                   |
| <code>number_of_tangent_t2n</code>    | The number of tangent numbers to compute                                     |

## Details

Efficient computation of Bernoulli numbers, tangent numbers, fibonacci numbers, and prime numbers.

The `checked_` functions ensure that the input is within valid bounds, while the `unchecked_` functions do not perform such checks, allowing for potentially faster computation at the risk of overflow or invalid input.

The `max_` functions return the maximum index for which the respective numbers can be computed using precomputed lookup tables.

## Value

A single numeric value for the Bernoulli numbers, tangent numbers, fibonacci numbers, or prime numbers, or a vector of values for ranges.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
bernoulli_b2n(10)
max_bernoulli_b2n()
unchecked_bernoulli_b2n(10)
bernoulli_b2n(start_index = 0, number_of_bernoullis_b2n = 10)
tangent_t2n(10)
tangent_t2n(start_index = 0, number_of_tangent_t2n = 10)
prime(10)
max_prime()
fibonacci(10)
unchecked_fibonacci(10)
```

---

`numerical_differentiation`*Numerical Differentiation*

---

**Description**

Functions for numerical differentiation using finite difference methods and complex step methods.

**Usage**

```
finite_difference_derivative(f, x, order = 1)
```

```
complex_step_derivative(f, x)
```

**Arguments**

|                    |                                                                                                         |
|--------------------|---------------------------------------------------------------------------------------------------------|
| <code>f</code>     | A function to differentiate. It should accept a single numeric value and return a single numeric value. |
| <code>x</code>     | The point at which to evaluate the derivative.                                                          |
| <code>order</code> | The order of accuracy of the derivative to compute. Default is 1.                                       |

**Value**

The approximate value of the derivative at the point `x`.

**Examples**

```
# Finite difference derivative of sin(x) at pi/4
finite_difference_derivative(sin, pi / 4)
# Complex step derivative of exp(x) at 1.7
complex_step_derivative(exp, 1.7)
```

---

`numerical_integration` *Numerical Integration*

---

**Description**

Functions for numerical integration using various methods such as trapezoidal rule, Gauss-Legendre quadrature, and Gauss-Kronrod quadrature.

**Usage**

```
trapezoidal(f, a, b, tol = sqrt(.Machine$double.eps), max_refinements = 12)

gauss_legendre(f, a, b, points = 7)

gauss_kronrod(
  f,
  a,
  b,
  points = 15,
  max_depth = 15,
  tol = sqrt(.Machine$double.eps)
)
```

**Arguments**

|                 |                                                                                                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| f               | A function to integrate. It should accept a single numeric value and return a single numeric value.                                       |
| a               | The lower limit of integration.                                                                                                           |
| b               | The upper limit of integration.                                                                                                           |
| tol             | The tolerance for the approximation. Default is <code>sqrt(.Machine\$double.eps)</code> .                                                 |
| max_refinements | The maximum number of refinements to apply. Default is 12.                                                                                |
| points          | The number of evaluation points to use in the Gauss-Legendre or Gauss-Kronrod quadrature.                                                 |
| max_depth       | Sets the maximum number of interval splittings for Gauss-Kronrod permitted before stopping. Set this to zero for non-adaptive quadrature. |

**Value**

A single numeric value with the computed integral.

**Examples**

```
# Trapezoidal rule integration of sin(x) from 0 to pi
trapezoidal(sin, 0, pi)
# Gauss-Legendre integration of exp(x) from 0 to 1
gauss_legendre(exp, 0, 1, points = 7)
# Adaptive Gauss-Kronrod integration of log(x) from 1 to 2
gauss_kronrod(log, 1, 2, points = 15, max_depth = 10)
```

---

ooura\_fourier\_integrals*Ooura Fourier Integrals*

---

**Description**

Computing Fourier sine and cosine integrals using Ooura's method.

**Usage**

```
ooura_fourier_sin(  
  f,  
  omega = 1,  
  relative_error_tolerance = sqrt(.Machine$double.eps),  
  levels = 8  
)  
  
ooura_fourier_cos(  
  f,  
  omega = 1,  
  relative_error_tolerance = sqrt(.Machine$double.eps),  
  levels = 8  
)
```

**Arguments**

|                          |                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------|
| f                        | A function to integrate. It should accept a single numeric value and return a single numeric value. |
| omega                    | The frequency parameter for the sine integral.                                                      |
| relative_error_tolerance | The relative error tolerance for the approximation.                                                 |
| levels                   | The number of levels of refinement to apply. Default is 8.                                          |

**Value**

A single numeric value with the computed Fourier sine or cosine integral, with attribute 'relative\_error' indicating the relative error of the approximation.

**Examples**

```
## Not run:  
# Fourier sine integral of sin(x) with omega = 1  
ooura_fourier_sin(function(x) { 1 / x }, omega = 1)  
# Fourier cosine integral of cos(x) with omega = 1  
ooura_fourier_cos(function(x) { 1 / (x * x + 1) }, omega = 1)  
  
## End(Not run)
```

---

|         |                         |
|---------|-------------------------|
| owens_t | <i>Owens T Function</i> |
|---------|-------------------------|

---

### Description

Computes the Owens T function of  $h$  and  $a$ , giving the probability of the event  $(X > h \text{ and } 0 < Y < a * X)$  where  $X$  and  $Y$  are independent standard normal random variables.

### Usage

```
owens_t(h, a)
```

### Arguments

|     |                                             |
|-----|---------------------------------------------|
| $h$ | The first argument of the Owens T function  |
| $a$ | The second argument of the Owens T function |

### Value

The value of the Owens T function at  $(h, a)$ .

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Owens T Function
owens_t(1, 0.5)
```

---

|                     |                                      |
|---------------------|--------------------------------------|
| pareto_distribution | <i>Pareto Distribution Functions</i> |
|---------------------|--------------------------------------|

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Pareto distribution.

**Usage**

```

pareto_pdf(x, shape = 1, scale = 1)

pareto_lpdf(x, shape = 1, scale = 1)

pareto_cdf(x, shape = 1, scale = 1)

pareto_lcdf(x, shape = 1, scale = 1)

pareto_quantile(p, shape = 1, scale = 1)

```

**Arguments**

|       |                                   |
|-------|-----------------------------------|
| x     | quantile                          |
| shape | shape parameter (default is 1)    |
| scale | scale parameter (default is 1)    |
| p     | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```

# Pareto distribution with shape = 1, scale = 1
pareto_pdf(1)
pareto_lpdf(1)
pareto_cdf(1)
pareto_lcdf(1)
pareto_quantile(0.5)

```

---

pchip

*PCHIP Interpolator*

---

**Description**

Constructs a PCHIP interpolator given the vectors of abscissas, ordinates, and derivatives.

**Usage**

```

pchip(x, y, left_endpoint_derivative = NULL, right_endpoint_derivative = NULL)

```

**Arguments**

`x`                      Numeric vector of abscissas (x-coordinates).  
`y`                      Numeric vector of ordinates (y-coordinates).  
`left_endpoint_derivative`  
                          Optional numeric value of the derivative at the left endpoint.  
`right_endpoint_derivative`  
                          Optional numeric value of the derivative at the right endpoint.

**Value**

An object of class `pchip` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `push_back(x, y)`: Add a new control point

**Examples**

```
x <- c(0, 1, 2, 3)
y <- c(0, 1, 0, 1)
interpolator <- pchip(x, y)
xi <- 0.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$push_back(4, 1)
```

---

`poisson_distribution`    *Poisson Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Poisson distribution.

**Usage**

```
poisson_pdf(x, lambda = 1)

poisson_lpdf(x, lambda = 1)

poisson_cdf(x, lambda = 1)

poisson_lcdf(x, lambda = 1)

poisson_quantile(p, lambda = 1)
```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| x      | quantile                          |
| lambda | rate parameter (default is 1)     |
| p      | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Poisson distribution with lambda = 1
poisson_pdf(0, 1)
poisson_lpdf(0, 1)
poisson_cdf(0, 1)
poisson_lcdf(0, 1)
poisson_quantile(0.5, 1)
```

---

polynomial\_root\_finding

*Polynomial Root-Finding*

---

**Description**

Functions for finding roots of polynomials of various degrees.

**Usage**

```
quadratic_roots(a, b, c)

cubic_roots(a, b, c, d)

cubic_root_residual(a, b, c, d, root)

cubic_root_condition_number(a, b, c, d, root)

quartic_roots(a, b, c, d, e)
```

Arguments

|      |                                                                                                            |
|------|------------------------------------------------------------------------------------------------------------|
| a    | Coefficient of the polynomial term (e.g., for quadratic $ax^2 + bx + c$ , a is the coefficient of $x^2$ ). |
| b    | Coefficient of the linear term (e.g., for quadratic $ax^2 + bx + c$ , b is the coefficient of $x$ ).       |
| c    | Constant term (e.g., for quadratic $ax^2 + bx + c$ , c is the constant).                                   |
| d    | Coefficient of the cubic term (for cubic $ax^3 + bx^2 + cx + d$ , d is the constant).                      |
| root | The root to evaluate the residual or condition number at.                                                  |
| e    | Coefficient of the quartic term (for quartic $ax^4 + bx^3 + cx^2 + dx + e$ , e is the constant).           |

Details

This package provides functions to find roots of quadratic, cubic, and quartic polynomials. The functions return the roots as numeric vectors.

Value

A numeric vector of the polynomial roots, residual, or condition number.

Examples

```
# Example of finding quadratic roots
quadratic_roots(1, -3, 2)
# Example of finding cubic roots
cubic_roots(1, -6, 11, -6)
# Example of finding quartic roots
quartic_roots(1, -10, 35, -50, 24)
# Example of finding cubic root residual
cubic_root_residual(1, -6, 11, -6, 1)
# Example of finding cubic root condition number
cubic_root_condition_number(1, -6, 11, -6, 1)
```

---

|                 |                                     |
|-----------------|-------------------------------------|
| quintic_hermite | <i>Quintic Hermite Interpolator</i> |
|-----------------|-------------------------------------|

---

Description

Constructs a quintic Hermite interpolator given the vectors of abscissas, ordinates, first derivatives, and second derivatives.

Usage

```
quintic_hermite(x, y, dydx, d2ydx2)
```

**Arguments**

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>x</code>      | Numeric vector of abscissas (x-coordinates).                |
| <code>y</code>      | Numeric vector of ordinates (y-coordinates).                |
| <code>dydx</code>   | Numeric vector of first derivatives (slopes) at each point. |
| <code>d2ydx2</code> | Numeric vector of second derivatives at each point.         |

**Value**

An object of class `quintic_hermite` with methods:

- `interpolate(xi)`: Evaluate the interpolator at point `xi`.
- `prime(xi)`: Evaluate the derivative of the interpolator at point `xi`.
- `double_prime(xi)`: Evaluate the second derivative of the interpolator at point `xi`.
- `push_back(x, y, dydx, d2ydx2)`: Add a new control point to the interpolator.
- `domain()`: Get the domain of the interpolator.

**Examples**

```
x <- c(0, 1, 2)
y <- c(0, 1, 0)
dydx <- c(1, 0, -1)
d2ydx2 <- c(0, -1, 0)
interpolator <- quintic_hermite(x, y, dydx, d2ydx2)
xi <- 0.5
interpolator$interpolate(xi)
interpolator$prime(xi)
interpolator$double_prime(xi)
interpolator$push_back(3, 0, 1, 0)
interpolator$domain()
```

---

rayleigh\_distribution *Rayleigh Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Rayleigh distribution.

**Usage**

```
rayleigh_pdf(x, scale = 1)

rayleigh_lpdf(x, scale = 1)

rayleigh_cdf(x, scale = 1)
```

```
rayleigh_lcdf(x, scale = 1)

rayleigh_quantile(p, scale = 1)
```

**Arguments**

|       |                                   |
|-------|-----------------------------------|
| x     | quantile                          |
| scale | scale parameter (default is 1)    |
| p     | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Rayleigh distribution with scale = 1
rayleigh_pdf(1)
rayleigh_lpdf(1)
rayleigh_cdf(1)
rayleigh_lcdf(1)
rayleigh_quantile(0.5)
```

---

rootfinding\_and\_minimisation

*Root-Finding and Minimisation Functions*

---

**Description**

Functions for root-finding and minimisation using various algorithms.

**Usage**

```
bisect(
  f,
  lower,
  upper,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

bracket_and_solve_root(
  f,
```

```
    guess,  
    factor,  
    rising,  
    digits = .Machine$double.digits,  
    max_iter = .Machine$integer.max  
)  
  
toms748_solve(  
  f,  
  lower,  
  upper,  
  digits = .Machine$double.digits,  
  max_iter = .Machine$integer.max  
)  
  
newton_raphson_iterate(  
  f,  
  guess,  
  lower,  
  upper,  
  digits = .Machine$double.digits,  
  max_iter = .Machine$integer.max  
)  
  
halley_iterate(  
  f,  
  guess,  
  lower,  
  upper,  
  digits = .Machine$double.digits,  
  max_iter = .Machine$integer.max  
)  
  
schroder_iterate(  
  f,  
  guess,  
  lower,  
  upper,  
  digits = .Machine$double.digits,  
  max_iter = .Machine$integer.max  
)  
  
brent_find_minima(  
  f,  
  lower,  
  upper,  
  digits = .Machine$double.digits,  
  max_iter = .Machine$integer.max
```

)

**Arguments**

|                       |                                                                                                                                                         |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>f</code>        | A function to find the root of or to minimise. It should take and return a single numeric value for root-finding, or a numeric vector for minimisation. |
| <code>lower</code>    | The lower bound of the interval to search for the root or minimum.                                                                                      |
| <code>upper</code>    | The upper bound of the interval to search for the root or minimum.                                                                                      |
| <code>digits</code>   | The number of significant digits to which the root or minimum should be found. Defaults to double precision.                                            |
| <code>max_iter</code> | The maximum number of iterations to perform. Defaults to the maximum integer value.                                                                     |
| <code>guess</code>    | A numeric value that is a guess for the root or minimum.                                                                                                |
| <code>factor</code>   | Size of steps to take when searching for the root.                                                                                                      |
| <code>rising</code>   | If TRUE, the function is assumed to be rising, otherwise it is assumed to be falling.                                                                   |

**Details**

This package provides a set of functions for finding roots of equations and minimising functions using different numerical methods. The methods include bisection, bracket and solve, TOMS 748, Newton-Raphson, Halley's method, Schroder's method, and Brent's method. It also includes functions for finding roots of polynomials (quadratic, cubic, quartic) and computing minima.

**Value**

A list containing the root or minimum value, the value of the function at that point, and the number of iterations performed.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
f <- function(x) x^2 - 2
bisect(f, lower = 0, upper = 2)
bracket_and_solve_root(f, guess = 1, factor = 0.1, rising = TRUE)
toms748_solve(f, lower = 0, upper = 2)
f <- function(x) c(x^2 - 2, 2 * x)
newton_raphson_iterate(f, guess = 1, lower = 0, upper = 2)
f <- function(x) c(x^2 - 2, 2 * x, 2)
halley_iterate(f, guess = 1, lower = 0, upper = 2)
schroder_iterate(f, guess = 1, lower = 0, upper = 2)
f <- function(x) (x - 2)^2 + 1
brent_find_minima(f, lower = 0, upper = 4)
```

---

runs\_tests*Runs Tests*

---

**Description**

Functions for Runs Tests.

**Usage**

```
runs_above_and_below_threshold(v, threshold)
```

```
runs_above_and_below_median(v)
```

**Arguments**

|           |                         |
|-----------|-------------------------|
| v         | A numeric vector.       |
| threshold | A single numeric value. |

**Value**

A two-element numeric vector containing the t-statistic and the p-value.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Runs Above and Below Threshold
runs_above_and_below_threshold(c(1, 2, 3, 4, 5), threshold = 3)
# Runs Above and Below Median
runs_above_and_below_median(c(1, 2, 3, 4, 5))
```

---

saspoint5\_distribution*SαS Point5 Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the SαS Point5 distribution.

**Usage**

```
saspoint5_pdf(x, location = 0, scale = 1)

saspoint5_lpdf(x, location = 0, scale = 1)

saspoint5_cdf(x, location = 0, scale = 1)

saspoint5_lcdf(x, location = 0, scale = 1)

saspoint5_quantile(p, location = 0, scale = 1)
```

**Arguments**

|          |                                   |
|----------|-----------------------------------|
| x        | quantile                          |
| location | location parameter (default is 0) |
| scale    | scale parameter (default is 1)    |
| p        | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# SaS Point5 distribution with location 0 and scale 1
saspoint5_pdf(3)
saspoint5_lpdf(3)
saspoint5_cdf(3)
saspoint5_lcdf(3)
saspoint5_quantile(0.5)
```

**Description**

Functions to compute various signal statistics.

**Usage**

```
absolute_gini_coefficient(x)

sample_absolute_gini_coefficient(x)

hoyer_sparsity(x)

oracle_snr(signal, noisy_signal)

oracle_snr_db(signal, noisy_signal)

m2m4_snr_estimator(noisy_signal, signal_kurtosis = 1, noise_kurtosis = 3)

m2m4_snr_estimator_db(noisy_signal, signal_kurtosis = 1, noise_kurtosis = 3)
```

**Arguments**

|                 |                         |
|-----------------|-------------------------|
| x               | A numeric vector.       |
| signal          | A numeric vector.       |
| noisy_signal    | A numeric vector.       |
| signal_kurtosis | A single numeric value. |
| noise_kurtosis  | A single numeric value. |

**Value**

A numeric value or vector with the computed statistic.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Absolute Gini Coefficient
absolute_gini_coefficient(c(1, 2, 3, 4, 5))
# Sample Absolute Gini Coefficient
sample_absolute_gini_coefficient(c(1, 2, 3, 4, 5))
# Hoyer Sparsity
hoyer_sparsity(c(1, 0, 0, 2, 3))

signal <- c(1, 2, 3)
noisy_signal <- c(1.1, 2.1, 3.1)
# Oracle SNR
oracle_snr(signal, noisy_signal)
# Oracle SNR in dB
oracle_snr_db(signal, noisy_signal)
# M2M4 SNR Estimator
m2m4_snr_estimator(noisy_signal, 3, 2)
```

```
# M2M4 SNR Estimator in dB
m2m4_snr_estimator_db(noisy_signal, 3, 2)
```

---

sinus\_cardinal\_hyperbolic\_functions

*Sinus Cardinal and Hyperbolic Functions*

---

## Description

Functions to compute the sinus cardinal function and hyperbolic sinus cardinal function.

## Usage

```
sinc_pi(x)
sinhc_pi(x)
```

## Arguments

|   |             |
|---|-------------|
| x | Input value |
|---|-------------|

## Value

A single numeric value with the computed sinus cardinal or hyperbolic sinus cardinal function.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Sinus cardinal function
sinc_pi(0.5)
# Hyperbolic sinus cardinal function
sinhc_pi(0.5)
```

---

`skew_normal_distribution`*Skew Normal Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Skew Normal distribution.

## Usage

```
skew_normal_pdf(x, location = 0, scale = 1, shape = 0)
skew_normal_lpdf(x, location = 0, scale = 1, shape = 0)
skew_normal_cdf(x, location = 0, scale = 1, shape = 0)
skew_normal_lcdf(x, location = 0, scale = 1, shape = 0)
skew_normal_quantile(p, location = 0, scale = 1, shape = 0)
```

## Arguments

|                       |                                   |
|-----------------------|-----------------------------------|
| <code>x</code>        | quantile                          |
| <code>location</code> | location parameter (default is 0) |
| <code>scale</code>    | scale parameter (default is 1)    |
| <code>shape</code>    | shape parameter (default is 0)    |
| <code>p</code>        | probability ( $0 \leq p \leq 1$ ) |

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Skew Normal distribution with location = 0, scale = 1, shape = 0
skew_normal_pdf(0)
skew_normal_lpdf(0)
skew_normal_cdf(0)
skew_normal_lcdf(0)
skew_normal_quantile(0.5)
```

---

|                     |                            |
|---------------------|----------------------------|
| spherical_harmonics | <i>Spherical Harmonics</i> |
|---------------------|----------------------------|

---

## Description

Functions to compute spherical harmonics and related functions.

## Usage

```
spherical_harmonic(n, m, theta, phi)
spherical_harmonic_r(n, m, theta, phi)
spherical_harmonic_i(n, m, theta, phi)
```

## Arguments

|       |                                  |
|-------|----------------------------------|
| n     | Degree of the spherical harmonic |
| m     | Order of the spherical harmonic  |
| theta | Polar angle (colatitude)         |
| phi   | Azimuthal angle (longitude)      |

## Value

A single complex value with the computed spherical harmonic function, or its real and imaginary parts.

## See Also

[Boost Documentation](#)

## Examples

```
# Spherical harmonic function Y_2^1(0.5, 0.5)
spherical_harmonic(2, 1, 0.5, 0.5)
# Real part of the spherical harmonic function Y_2^1(0.5, 0.5)
spherical_harmonic_r(2, 1, 0.5, 0.5)
# Imaginary part of the spherical harmonic function Y_2^1(0.5, 0.5)
spherical_harmonic_i(2, 1, 0.5, 0.5)
```

---

`students_t_distribution`*Student's T Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Student's t distribution.

## Usage

```
students_t_pdf(x, df = 1)

students_t_lpdf(x, df = 1)

students_t_cdf(x, df = 1)

students_t_lcdf(x, df = 1)

students_t_quantile(p, df = 1)
```

## Arguments

|                 |                                   |
|-----------------|-----------------------------------|
| <code>x</code>  | quantile                          |
| <code>df</code> | degrees of freedom (default is 1) |
| <code>p</code>  | probability ( $0 \leq p \leq 1$ ) |

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Student's t distribution with 3 degrees of freedom
students_t_pdf(0, 3)
students_t_lpdf(0, 3)
students_t_cdf(0, 3)
students_t_lcdf(0, 3)
students_t_quantile(0.5, 3)
```

---

`triangular_distribution`*Triangular Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Triangular distribution.

## Usage

```
triangular_pdf(x, lower = 0, mode = 1, upper = 2)
triangular_lpdf(x, lower = 0, mode = 1, upper = 2)
triangular_cdf(x, lower = 0, mode = 1, upper = 2)
triangular_lcdf(x, lower = 0, mode = 1, upper = 2)
triangular_quantile(p, lower = 0, mode = 1, upper = 2)
```

## Arguments

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>x</code>     | quantile                                       |
| <code>lower</code> | lower limit of the distribution (default is 0) |
| <code>mode</code>  | mode of the distribution (default is 1)        |
| <code>upper</code> | upper limit of the distribution (default is 2) |
| <code>p</code>     | probability ( $0 \leq p \leq 1$ )              |

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Triangular distribution with lower = 0, mode = 1, upper = 2
triangular_pdf(1)
triangular_lpdf(1)
triangular_cdf(1)
triangular_lcdf(1)
triangular_quantile(0.5)
```

---

t\_tests

*T-Tests*

---

## Description

Functions for T - Tests.

## Usage

```
one_sample_t_test_params(  
  sample_mean,  
  sample_variance,  
  num_samples,  
  assumed_mean  
)  
  
one_sample_t_test(u, assumed_mean)  
  
two_sample_t_test(u, v)  
  
paired_samples_t_test(u, v)
```

## Arguments

|                 |                   |
|-----------------|-------------------|
| sample_mean     | A single value.   |
| sample_variance | A single value.   |
| num_samples     | A single value.   |
| assumed_mean    | A single value.   |
| u               | A numeric vector. |
| v               | A numeric vector. |

## Value

A two-element numeric vector containing the t-statistic and the p-value.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# One Sample T-Test Parameters  
one_sample_t_test_params(sample_mean = 2, sample_variance = 1, num_samples = 30, assumed_mean = 0)  
# One Sample T-Test  
one_sample_t_test(c(5, 6, 7), assumed_mean = 4)  
# Two Sample T-Test
```

```
two_sample_t_test(c(5, 6, 7), c(4, 5, 6))  
# Paired Samples T-Test  
paired_samples_t_test(c(5, 6, 7), c(4, 5, 6))
```

---

**uniform\_distribution**    *Uniform Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Uniform distribution.

**Usage**

```
uniform_pdf(x, lower = 0, upper = 1)  
  
uniform_lpdf(x, lower = 0, upper = 1)  
  
uniform_cdf(x, lower = 0, upper = 1)  
  
uniform_lcdf(x, lower = 0, upper = 1)  
  
uniform_quantile(p, lower = 0, upper = 1)
```

**Arguments**

|       |                                                |
|-------|------------------------------------------------|
| x     | quantile                                       |
| lower | lower bound of the distribution (default is 0) |
| upper | upper bound of the distribution (default is 1) |
| p     | probability ( $0 \leq p \leq 1$ )              |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Uniform distribution with lower = 0, upper = 1  
uniform_pdf(0.5)  
uniform_lpdf(0.5)  
uniform_cdf(0.5)  
uniform_lcdf(0.5)  
uniform_quantile(0.5)
```

---

**univariate\_statistics** *Univariate Statistics Functions*

---

**Description**

Functions to compute various univariate statistics.

**Usage**

```
mean_boost(x)

variance(x)

sample_variance(x)

mean_and_sample_variance(x)

skewness(x)

kurtosis(x)

excess_kurtosis(x)

first_four_moments(x)

median_boost(x)

median_absolute_deviation(x)

interquartile_range(x)

gini_coefficient(x)

sample_gini_coefficient(x)

mode_boost(x)
```

**Arguments**

**x**                      A numeric vector.

**Value**

A numeric value or vector with the computed statistic.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Mean
mean_boost(c(1, 2, 3, 4, 5))
# Variance
variance(c(1, 2, 3, 4, 5))
# Sample Variance
sample_variance(c(1, 2, 3, 4, 5))
# Mean and Sample Variance
mean_and_sample_variance(c(1, 2, 3, 4, 5))
# Skewness
skewness(c(1, 2, 3, 4, 5))
# Kurtosis
kurtosis(c(1, 2, 3, 4, 5))
# Excess Kurtosis
excess_kurtosis(c(1, 2, 3, 4, 5))
# First Four Moments
first_four_moments(c(1, 2, 3, 4, 5))
# Median
median_boost(c(1, 2, 3, 4, 5))
# Median Absolute Deviation
median_absolute_deviation(c(1, 2, 3, 4, 5))
# Interquartile Range
interquartile_range(c(1, 2, 3, 4, 5))
# Gini Coefficient
gini_coefficient(c(1, 2, 3, 4, 5))
# Sample Gini Coefficient
sample_gini_coefficient(c(1, 2, 3, 4, 5))
# Mode
mode_boost(c(1, 2, 2, 3, 4))
```

---

|                    |                           |
|--------------------|---------------------------|
| vector_functionals | <i>Vector Functionals</i> |
|--------------------|---------------------------|

---

**Description**

Functions to compute various vector norms and distances.

**Usage**

```
l0_pseudo_norm(x)

hamming_distance(x, y)

l1_norm(x)

l1_distance(x, y)

l2_norm(x)
```

```
l2_distance(x, y)

sup_norm(x)

sup_distance(x, y)

lp_norm(x, p)

lp_distance(x, y, p)

total_variation(x)
```

### Arguments

|   |                                                                                     |
|---|-------------------------------------------------------------------------------------|
| x | A numeric vector.                                                                   |
| y | A numeric vector of the same length as x (for distance functions).                  |
| p | A positive integer indicating the order of the norm or distance (for Lp functions). |

### Value

A single numeric value with the computed norm or distance.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# L0 Pseudo Norm
l0_pseudo_norm(c(1, 0, 2, 0, 3))
# Hamming Distance
hamming_distance(c(1, 0, 1), c(0, 1, 1))
# L1 Norm
l1_norm(c(1, -2, 3))
# L1 Distance
l1_distance(c(1, -2, 3), c(4, -5, 6))
# L2 Norm
l2_norm(c(3, 4))
# L2 Distance
l2_distance(c(3, 4), c(0, 0))
# Supremum Norm
sup_norm(c(1, -2, 3))
# Supremum Distance
sup_distance(c(1, -2, 3), c(4, -5, 6))
# Lp Norm
lp_norm(c(1, -2, 3), 3)
# Lp Distance
lp_distance(c(1, -2, 3), c(4, -5, 6), 3)
# Total Variation
total_variation(c(1, 2, 1, 3))
```

---

**weibull\_distribution**    *Weibull Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Weibull distribution.

**Usage**

```
weibull_pdf(x, shape = 1, scale = 1)

weibull_lpdf(x, shape = 1, scale = 1)

weibull_cdf(x, shape = 1, scale = 1)

weibull_lcdf(x, shape = 1, scale = 1)

weibull_quantile(p, shape = 1, scale = 1)
```

**Arguments**

|       |                                   |
|-------|-----------------------------------|
| x     | quantile                          |
| shape | shape parameter (default is 1)    |
| scale | scale parameter (default is 1)    |
| p     | probability ( $0 \leq p \leq 1$ ) |

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Weibull distribution with shape = 1, scale = 1
weibull_pdf(1)
weibull_lpdf(1)
weibull_cdf(1)
weibull_lcdf(1)
weibull_quantile(0.5)
```

---

|      |                              |
|------|------------------------------|
| zeta | <i>Riemann Zeta Function</i> |
|------|------------------------------|

---

**Description**

Computes the Riemann zeta function ( $\zeta(s)$ ) for argument ( $z$ ).

**Usage**

```
zeta(z)
```

**Arguments**

|   |                   |
|---|-------------------|
| z | Real number input |
|---|-------------------|

**Value**

The value of the Riemann zeta function ( $\zeta(z)$ ).

**Examples**

```
# Riemann Zeta Function
zeta(2) # Should return pi^2 / 6
```

---

|         |                |
|---------|----------------|
| z_tests | <i>Z-Tests</i> |
|---------|----------------|

---

**Description**

Functions for Z - Tests.

**Usage**

```
one_sample_z_test_params(
  sample_mean,
  sample_variance,
  num_samples,
  assumed_mean
)

one_sample_z_test(u, assumed_mean)

two_sample_z_test(u, v)
```

**Arguments**

|                 |                   |
|-----------------|-------------------|
| sample_mean     | A single value.   |
| sample_variance | A single value.   |
| num_samples     | A single value.   |
| assumed_mean    | A single value.   |
| u               | A numeric vector. |
| v               | A numeric vector. |

**Value**

A two-element numeric vector containing the t-statistic and the p-value.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# One Sample T-Test Parameters
one_sample_z_test_params(sample_mean = 2, sample_variance = 1, num_samples = 30, assumed_mean = 0)
# One Sample T-Test
one_sample_z_test(c(5, 6, 7), assumed_mean = 4)
# Two Sample T-Test
two_sample_z_test(c(5, 6, 7), c(4, 5, 6))
```
